Turma de FrontEnd – IF UFRGS

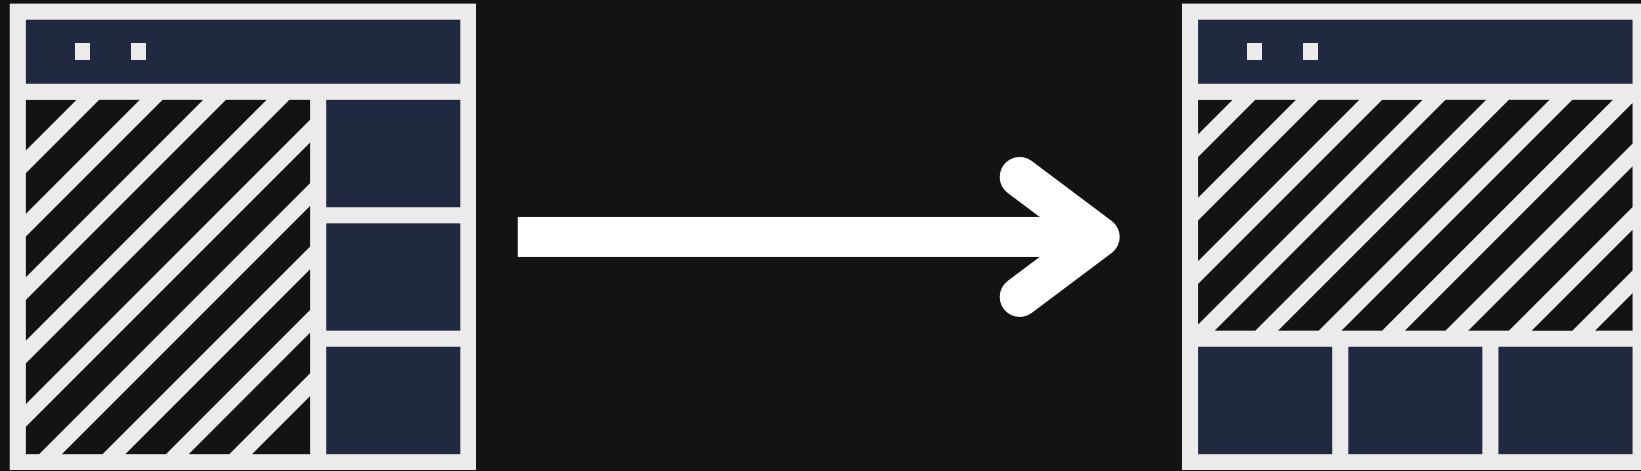

● Versionamento de códigos

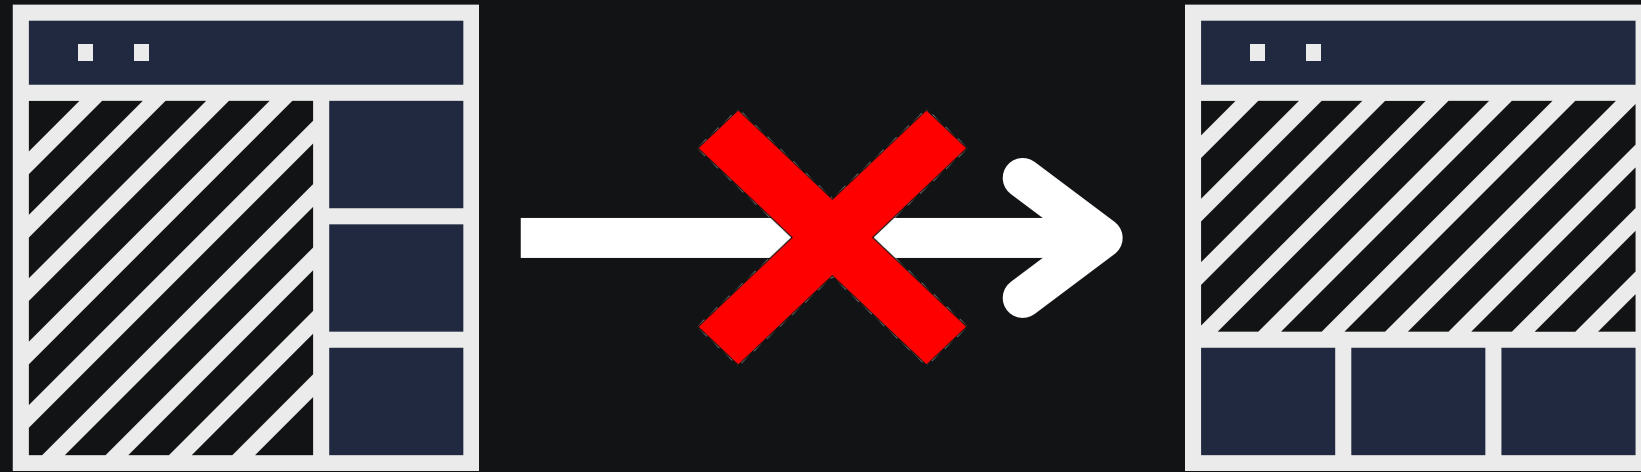

Digamos que você tem um projeto, criou uma página e ela está funcionando normalmente, porém você quer testar uma alteração. O que você faz? Altera o código direto? E se der errado, ou se você se arrepender? Então digamos que você faça uma cópia, mas e se tiver outra alteração? E outra? E mais uma? Quantas cópias você vai criar? Para esse tipo de problema existe o versionamento.

● Versionamento de códigos: git

O versionamento serve para criar versões do seu projeto, pontos nos quais você pode voltar caso alguma alteração dê errado.

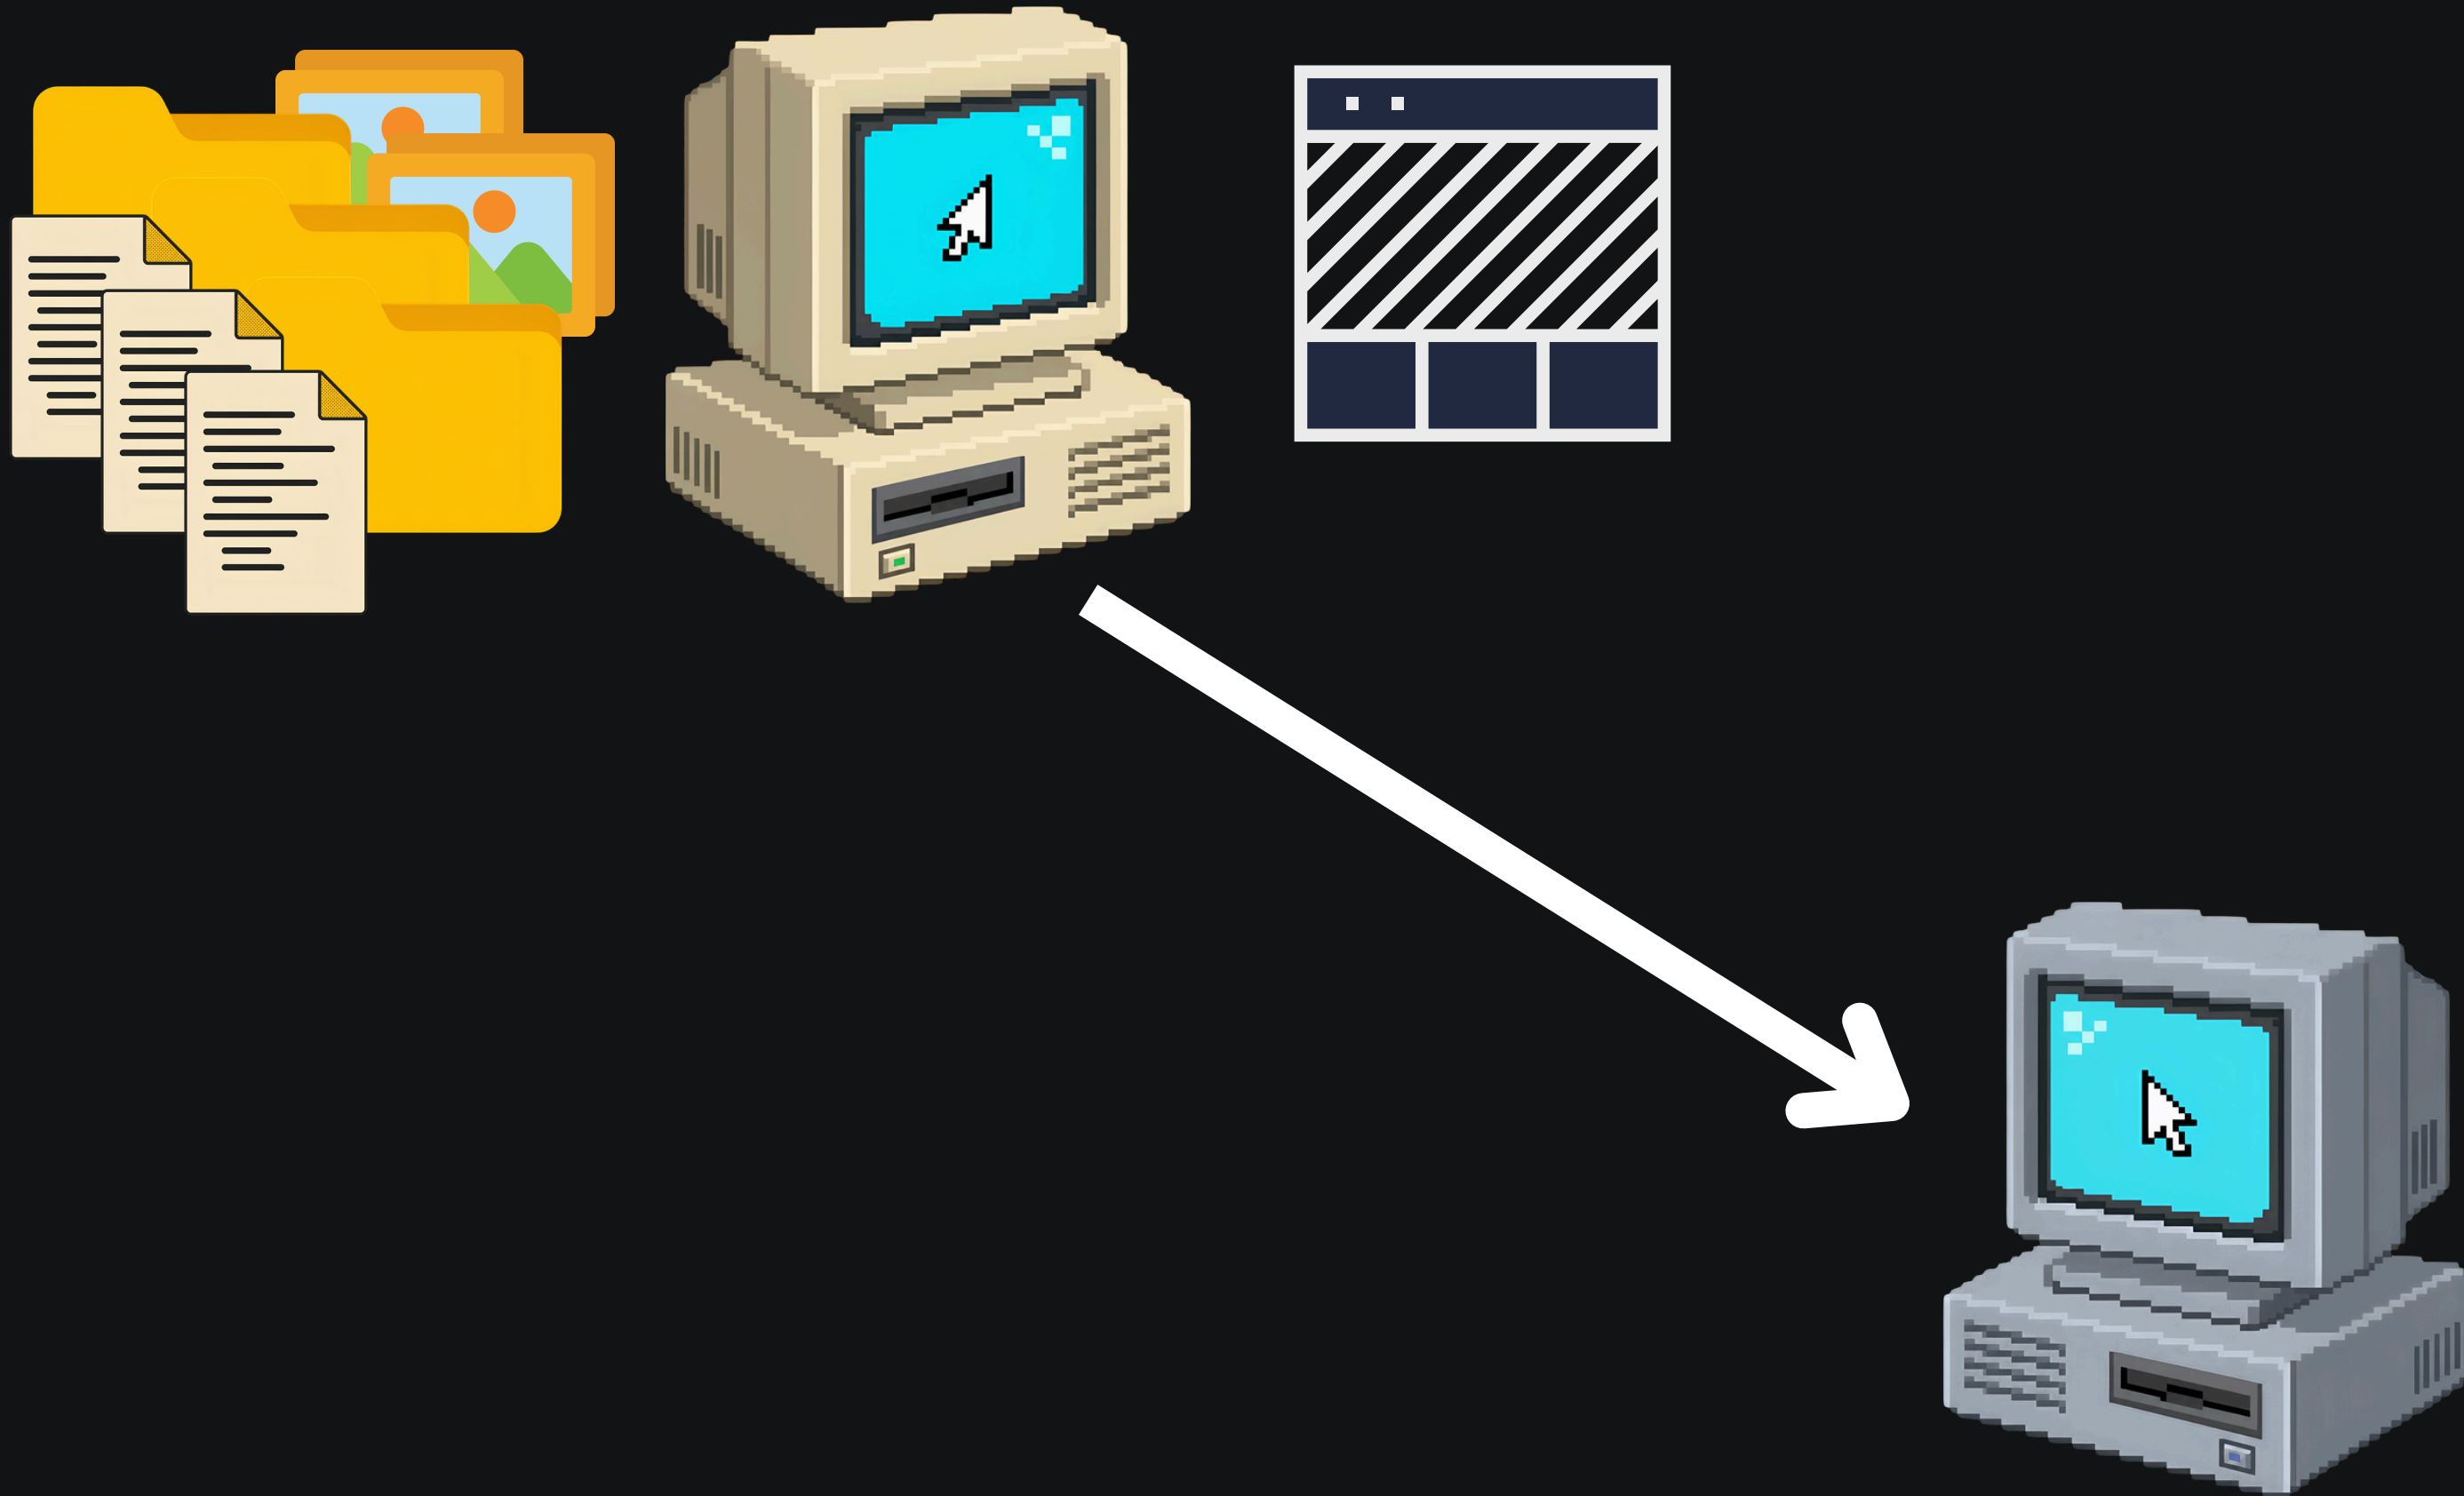

A ferramenta mais famosa é o git, que permite criar, além dos checkpoints, as branches, que seriam versões alternativas do seu código onde você irá testar novas features.

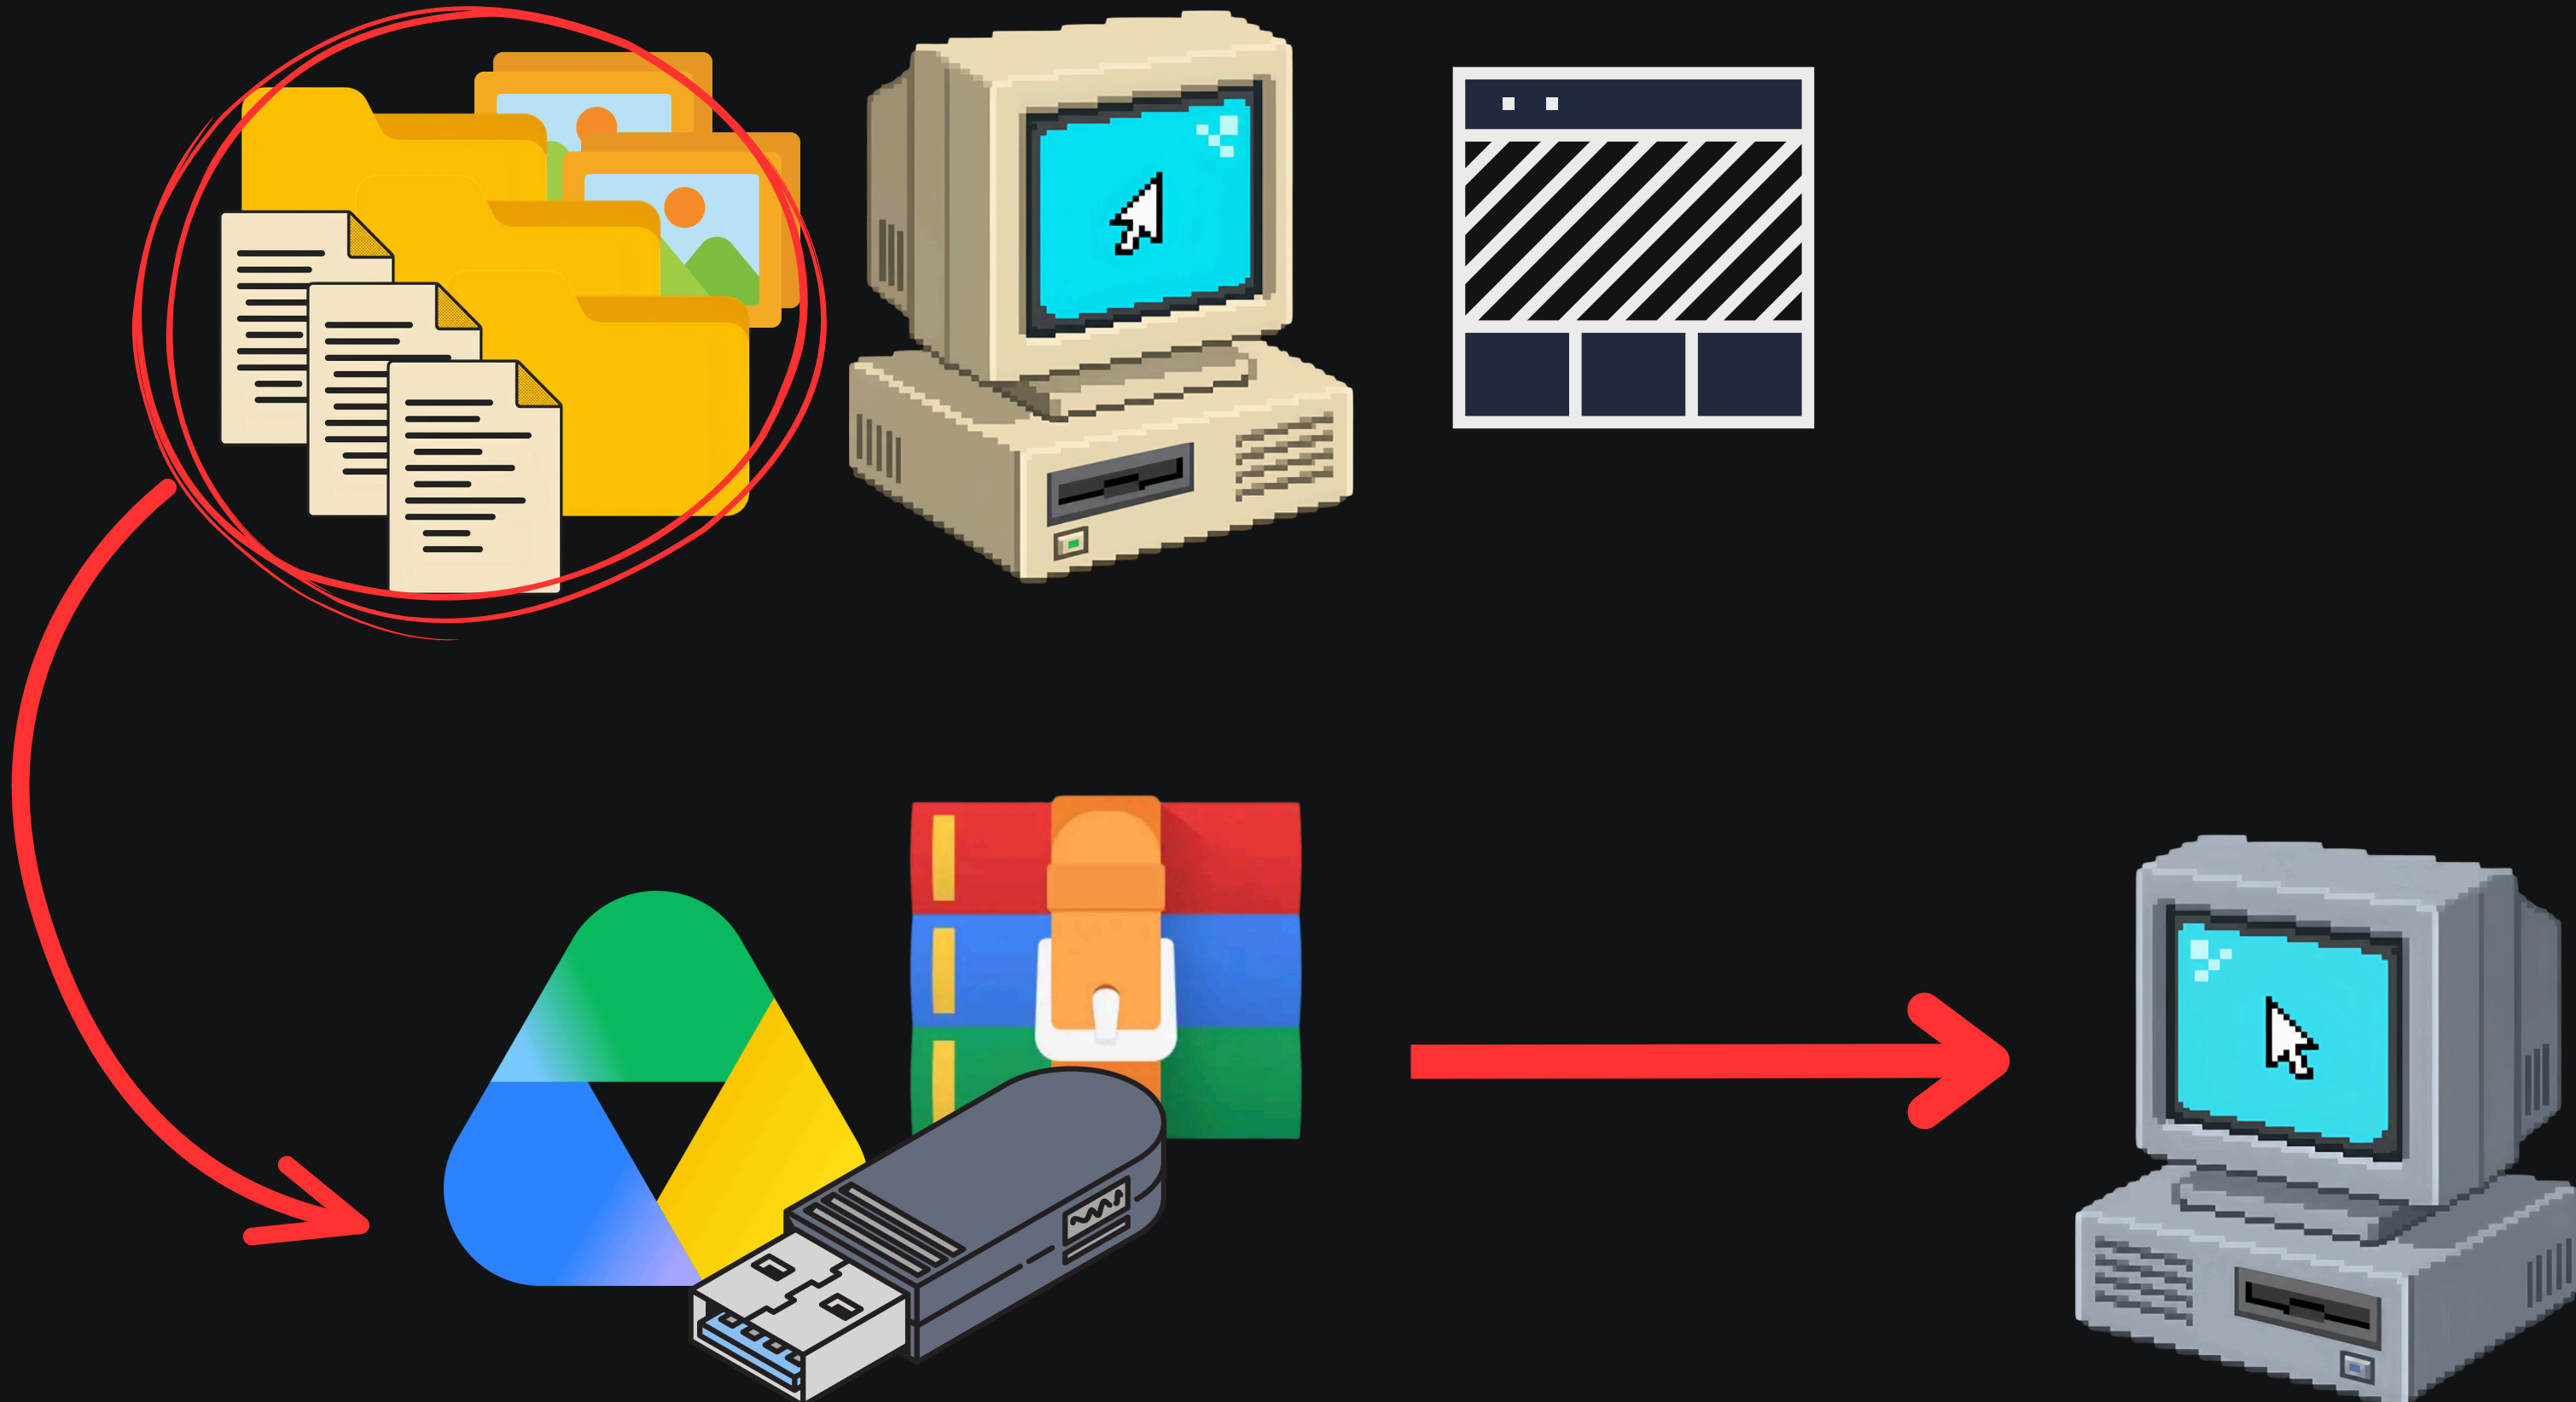

● Versionamento de códigos

● Repositório local e remoto

● Repositório local e remoto

● Repositório local e remoto

● Repositório local e remoto

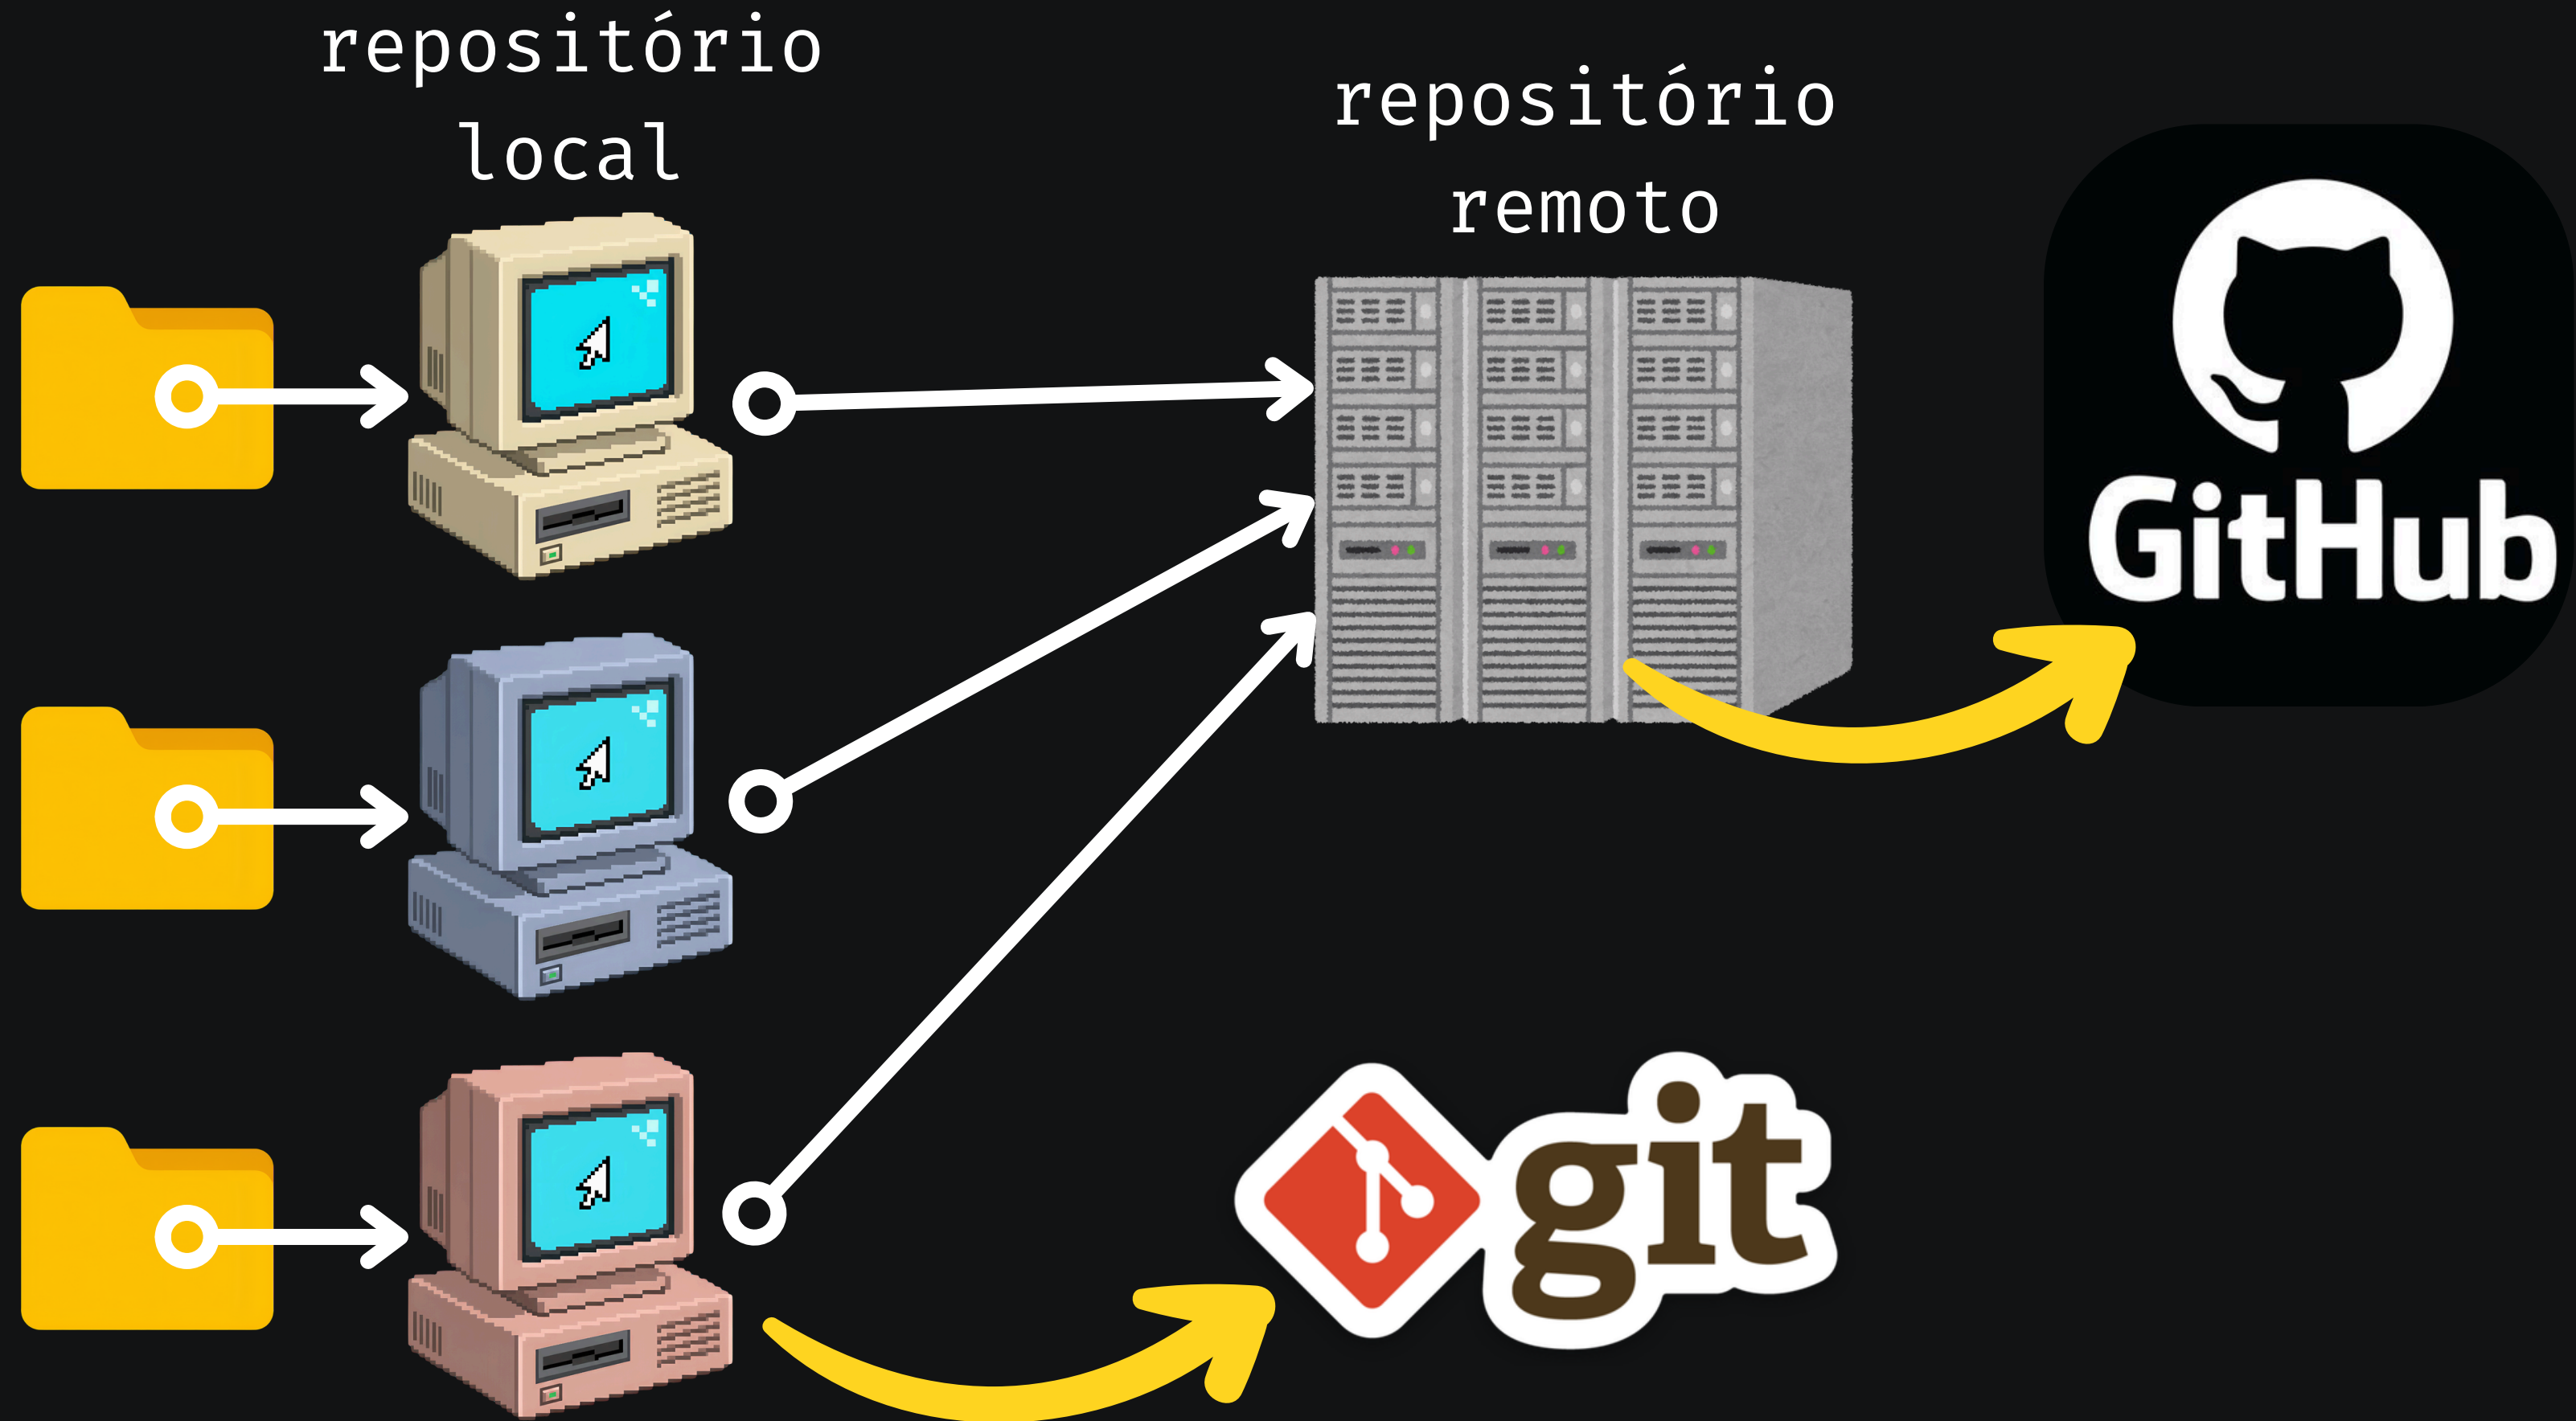

O git cria repositórios locais, é como um backup que fica salvo no seu computador, com todo o histórico de alterações do seus códigos.

Além dele existe o GitHub, que é uma plataforma de hospedagem de repositórios, lá você pode publicar seus projetos e compartilhar com amigos e colegas.

● Repositório local e remoto

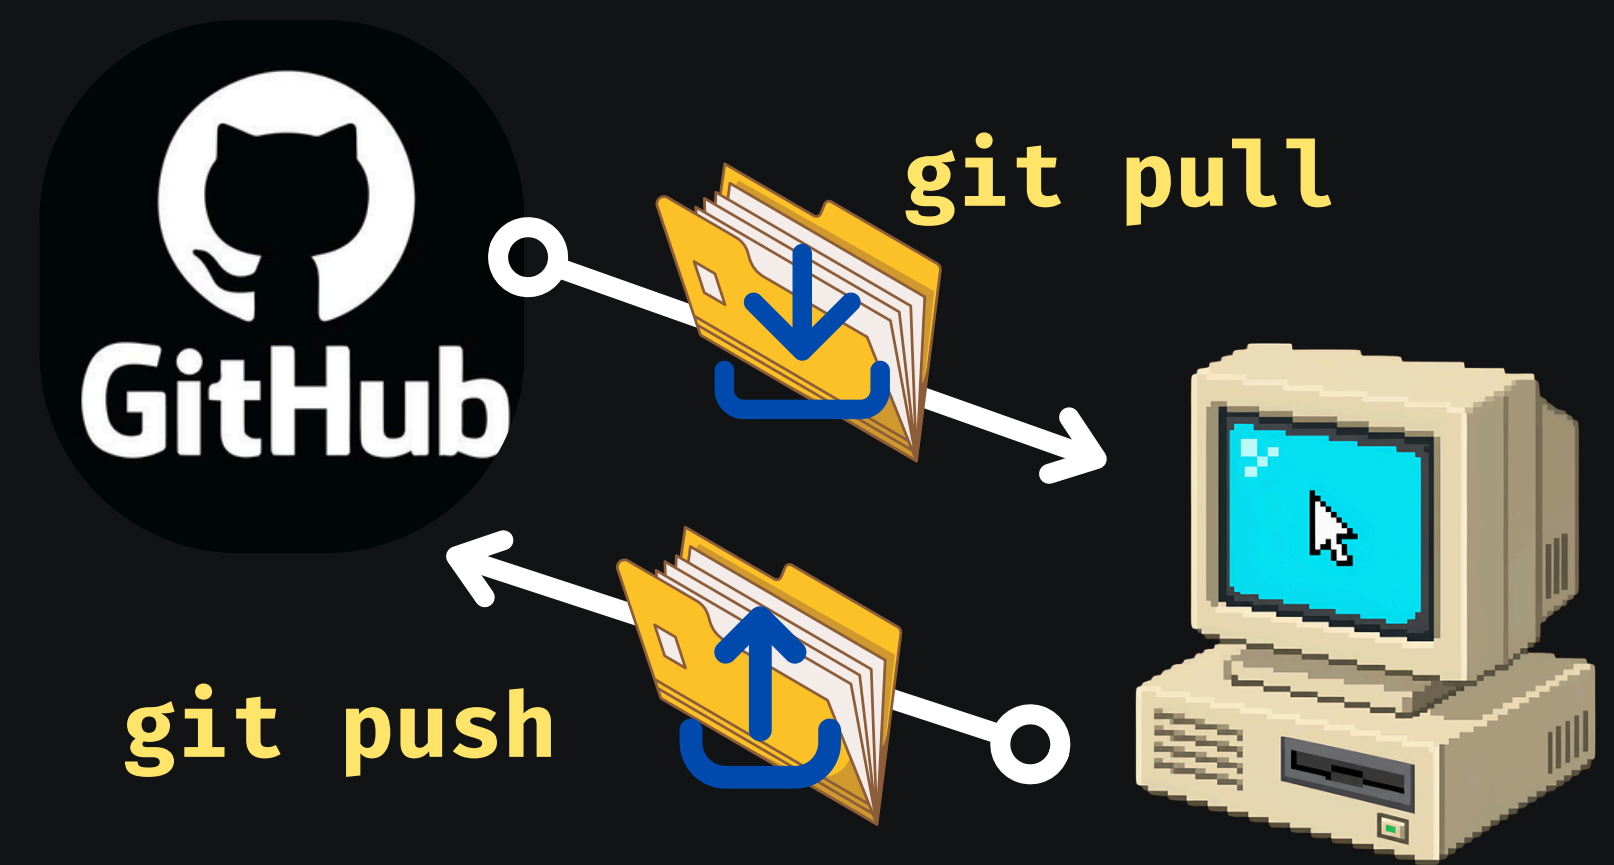

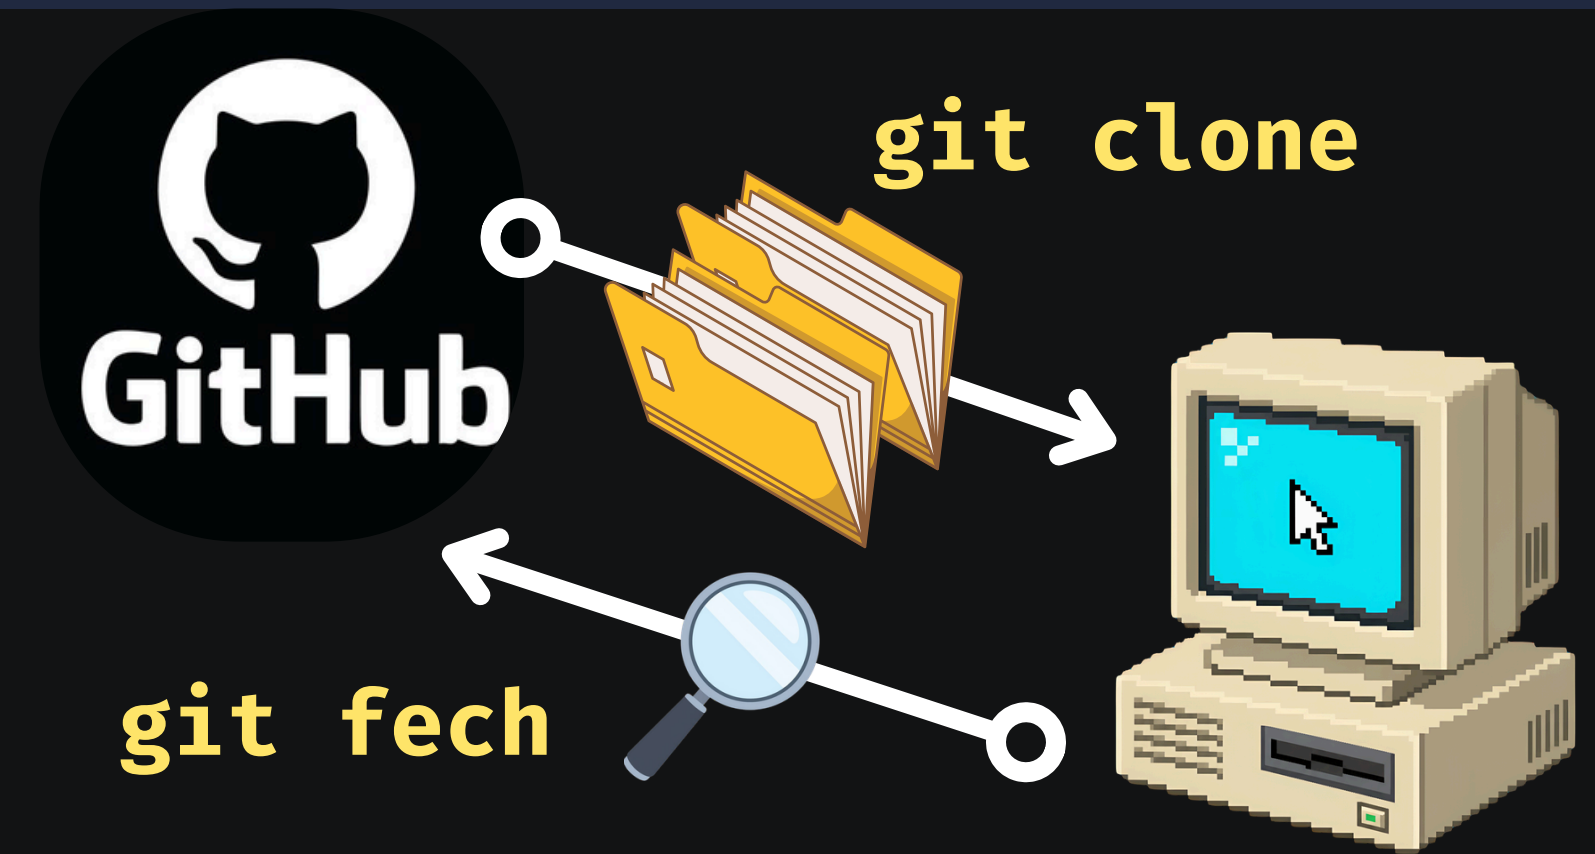

● Repositório local e remoto

O git funciona por comandos, alguns dos mais usados são:

- **git clone:** clona e baixa um repositório online;
- **git fetch:** verifica se existem alterações para download;
- **git pull:** baixa as ultimas atualizações;
- **git commit:** atualiza o repositório local;
- **git push:** atualiza o repositório remoto.

● GitHub Desktop – Criando um repositório

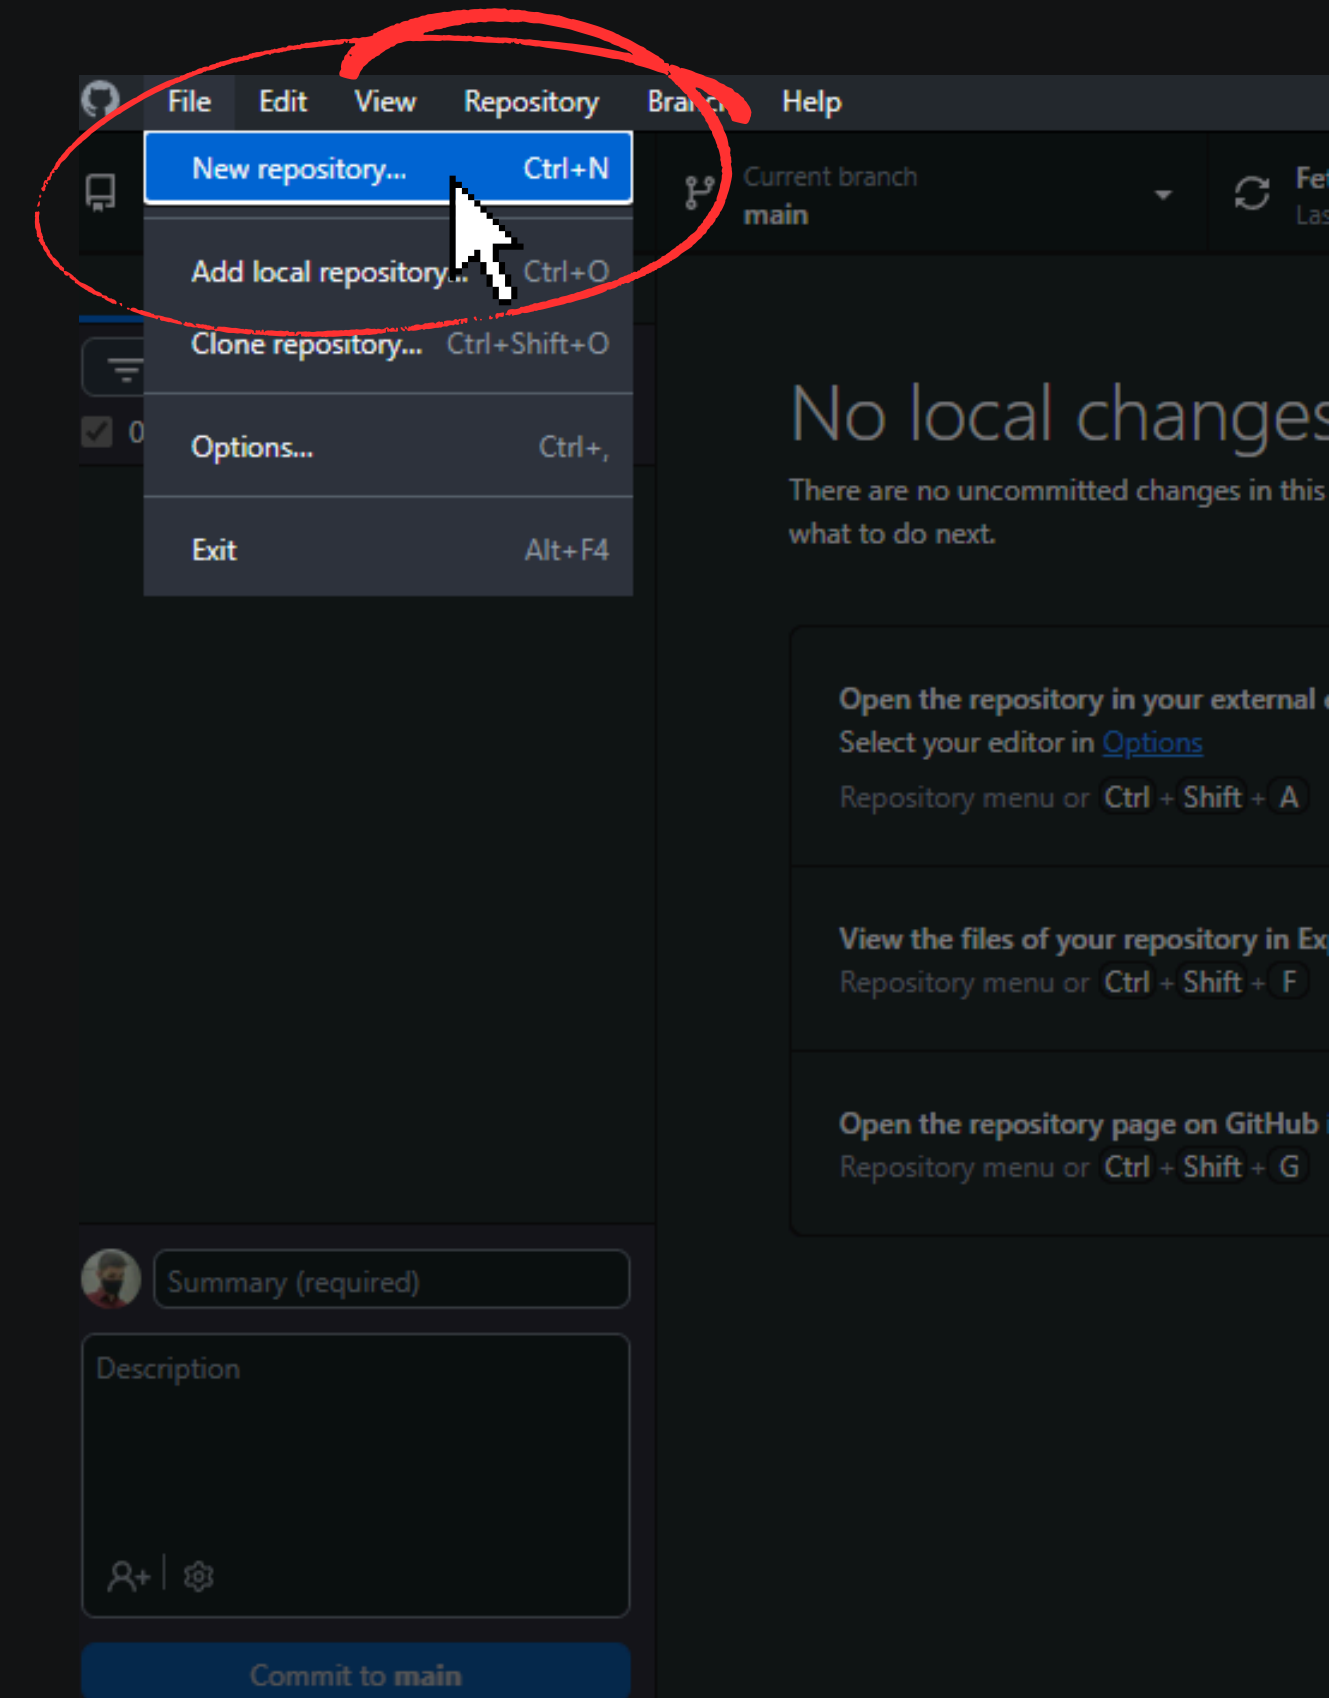

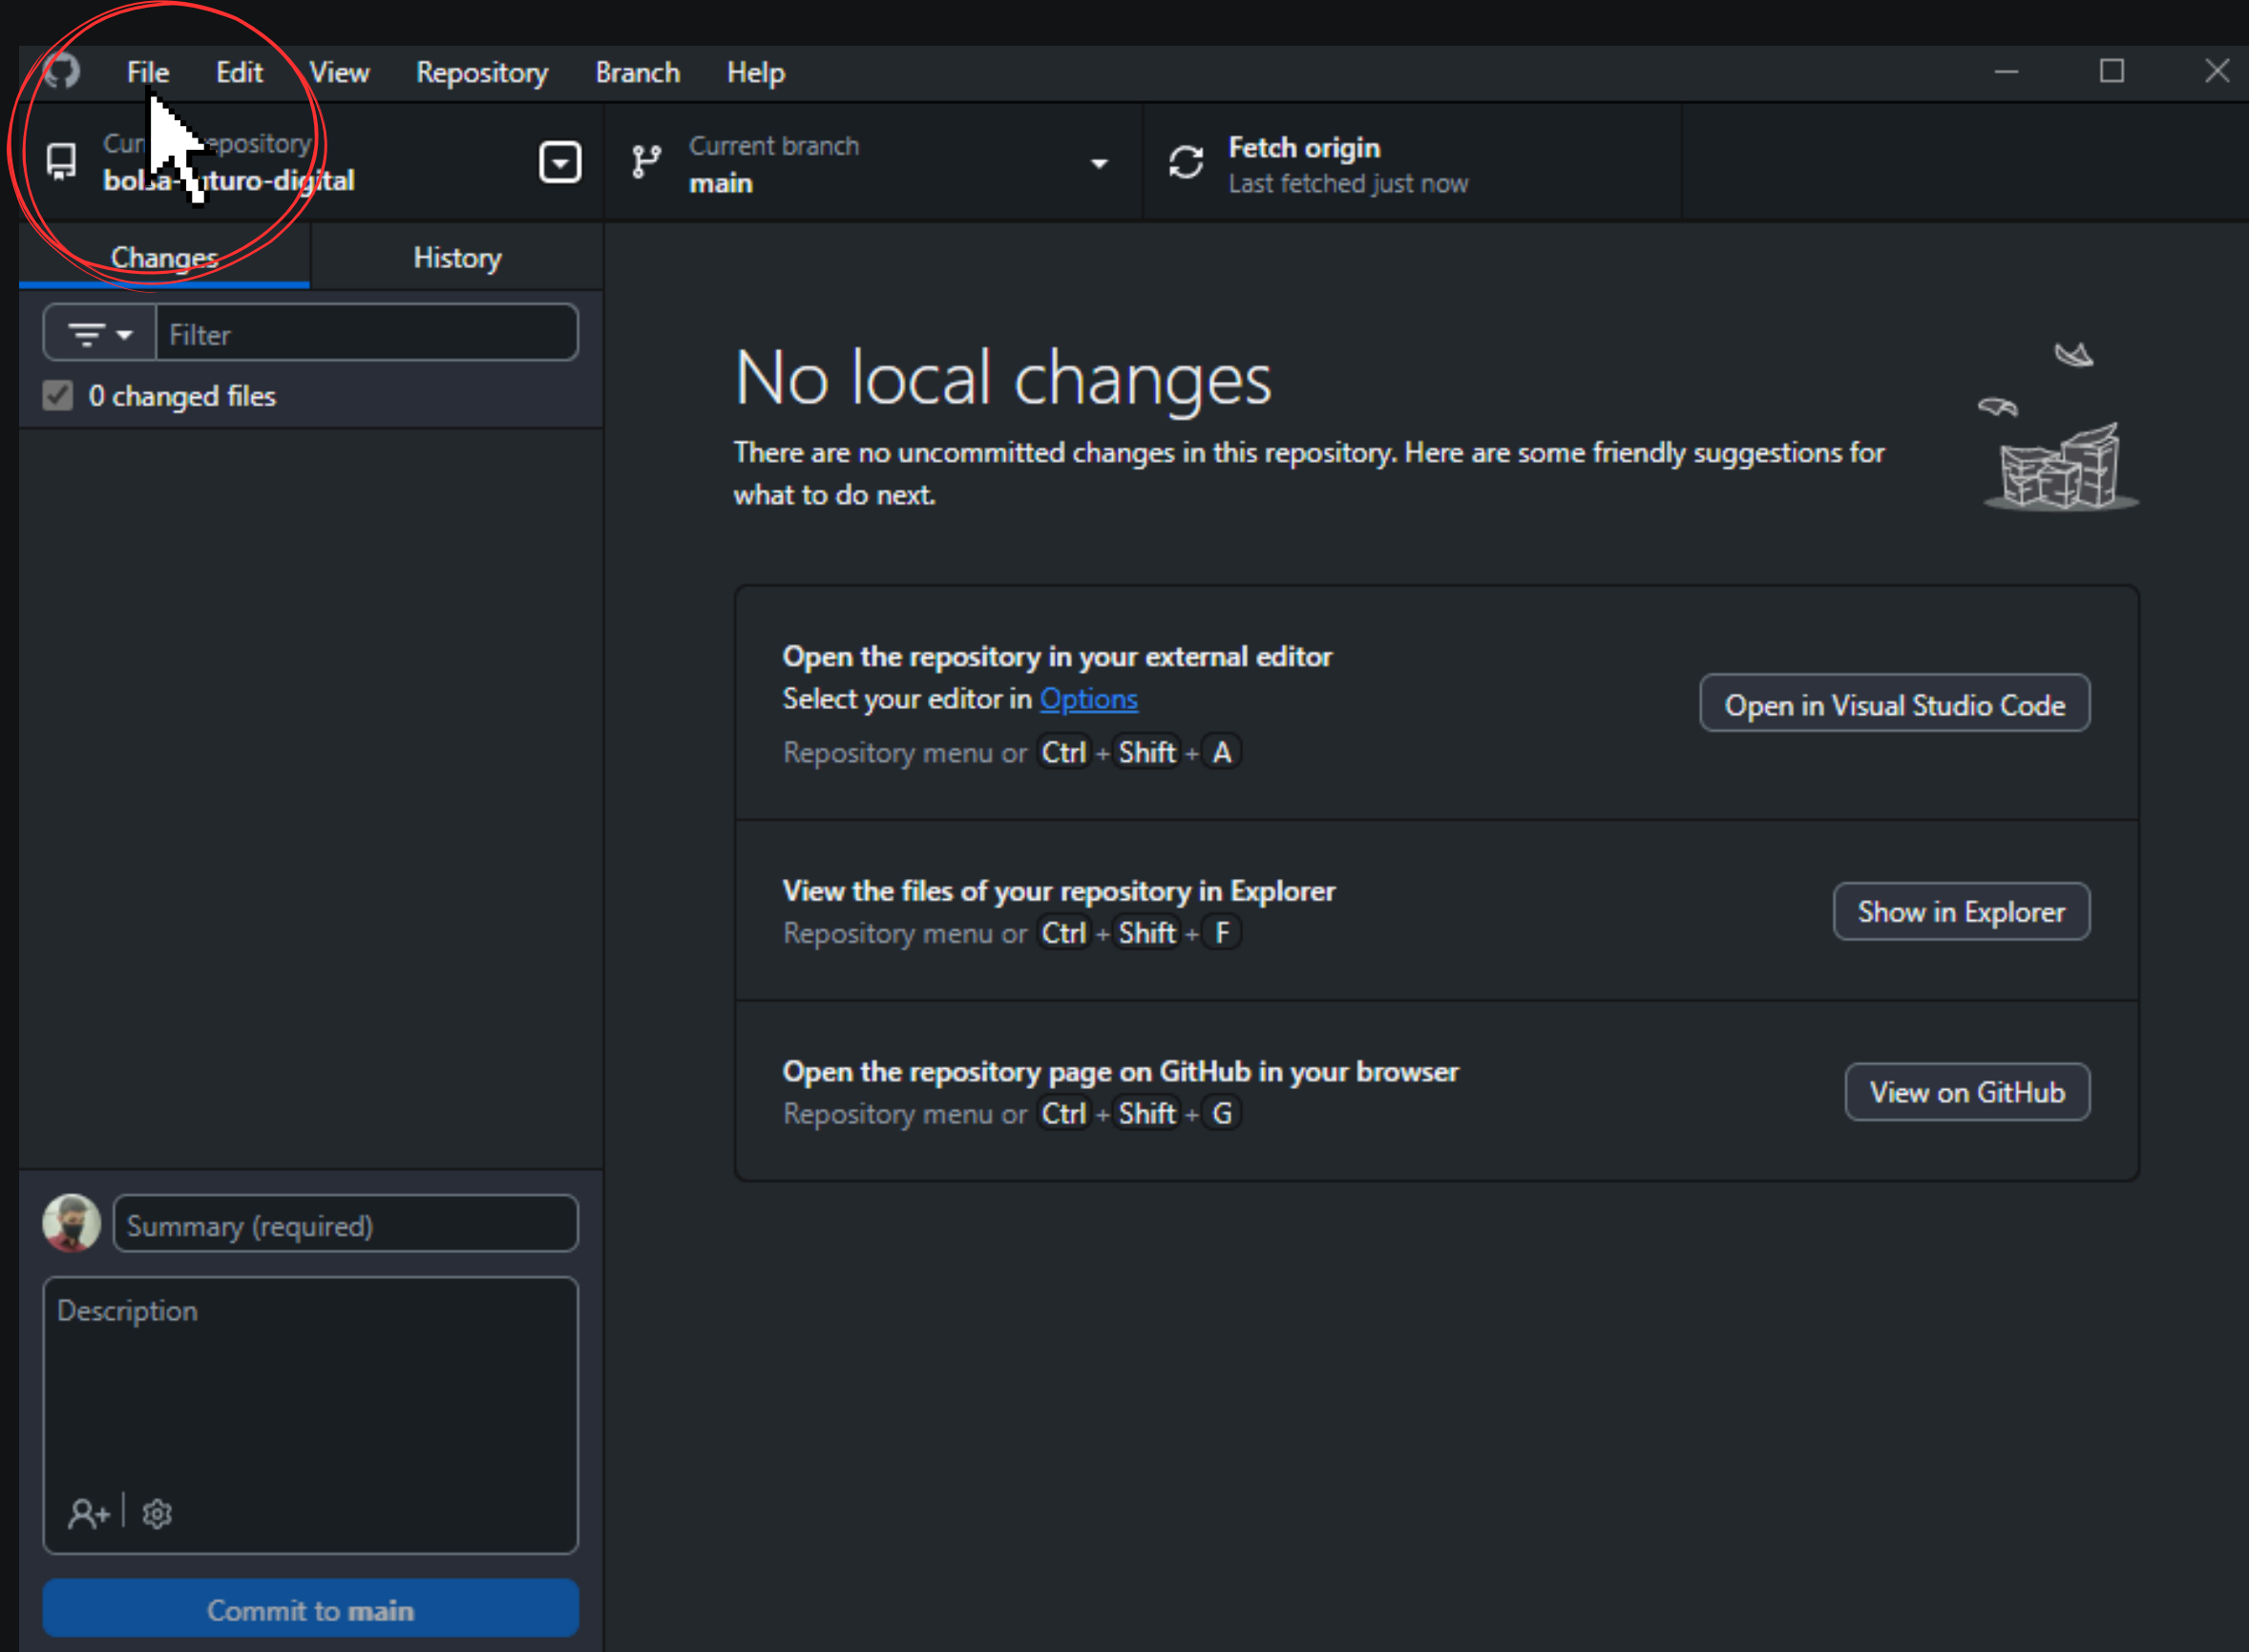

The image shows a sequence of three screenshots from the GitHub Desktop application, illustrating the steps to create a repository.

First Screenshot: The main window of GitHub Desktop is shown. The 'File' menu is circled in red. The main area displays 'Let's get started' and 'Add a repository to GitHub Desktop'. Below this are three options: 'Clone a repository from the Internet...', 'Create a New Repository on your local drive...', and 'Add an Existing Repository to your local drive...'. A 'ProTip!' box at the bottom suggests adding an existing repository to the desktop.

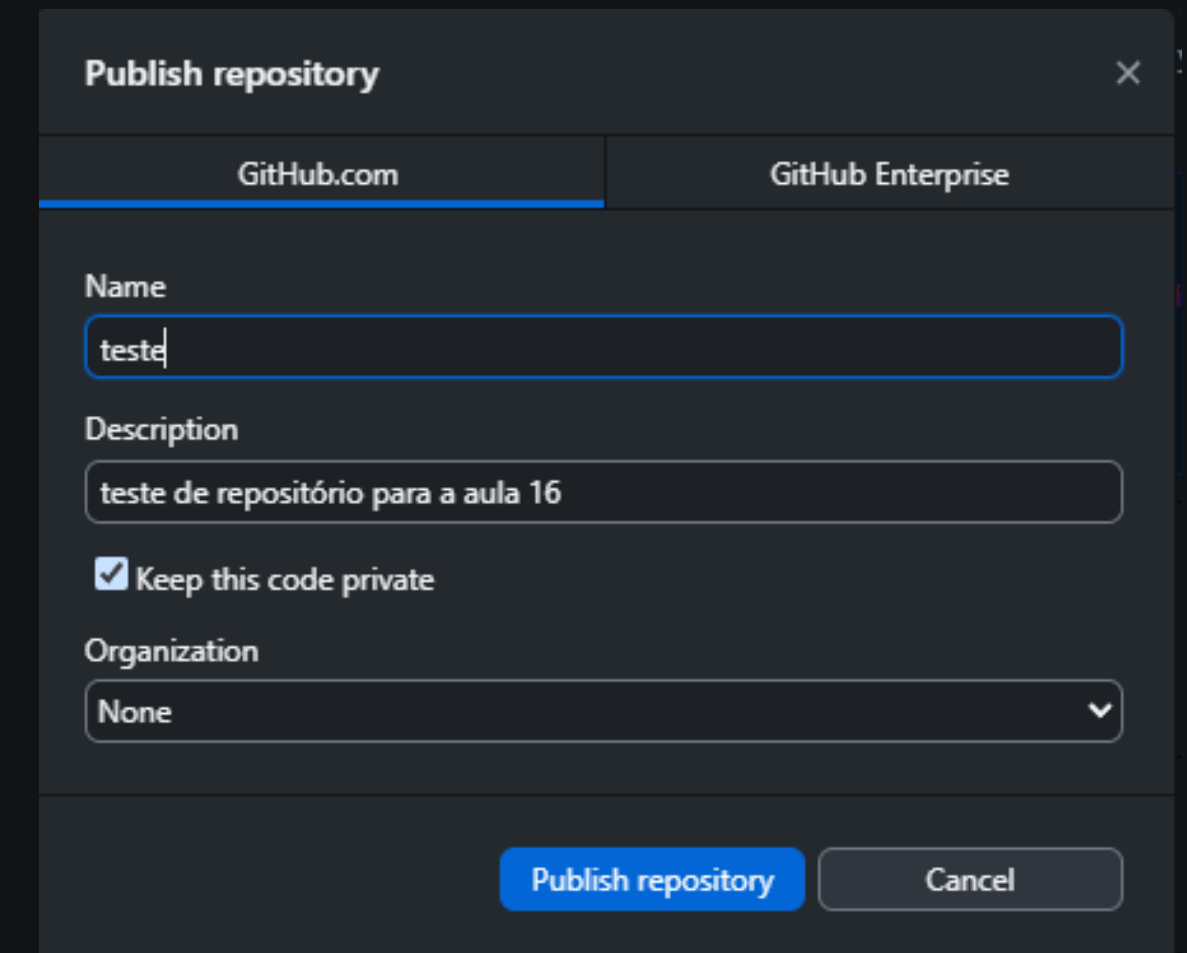

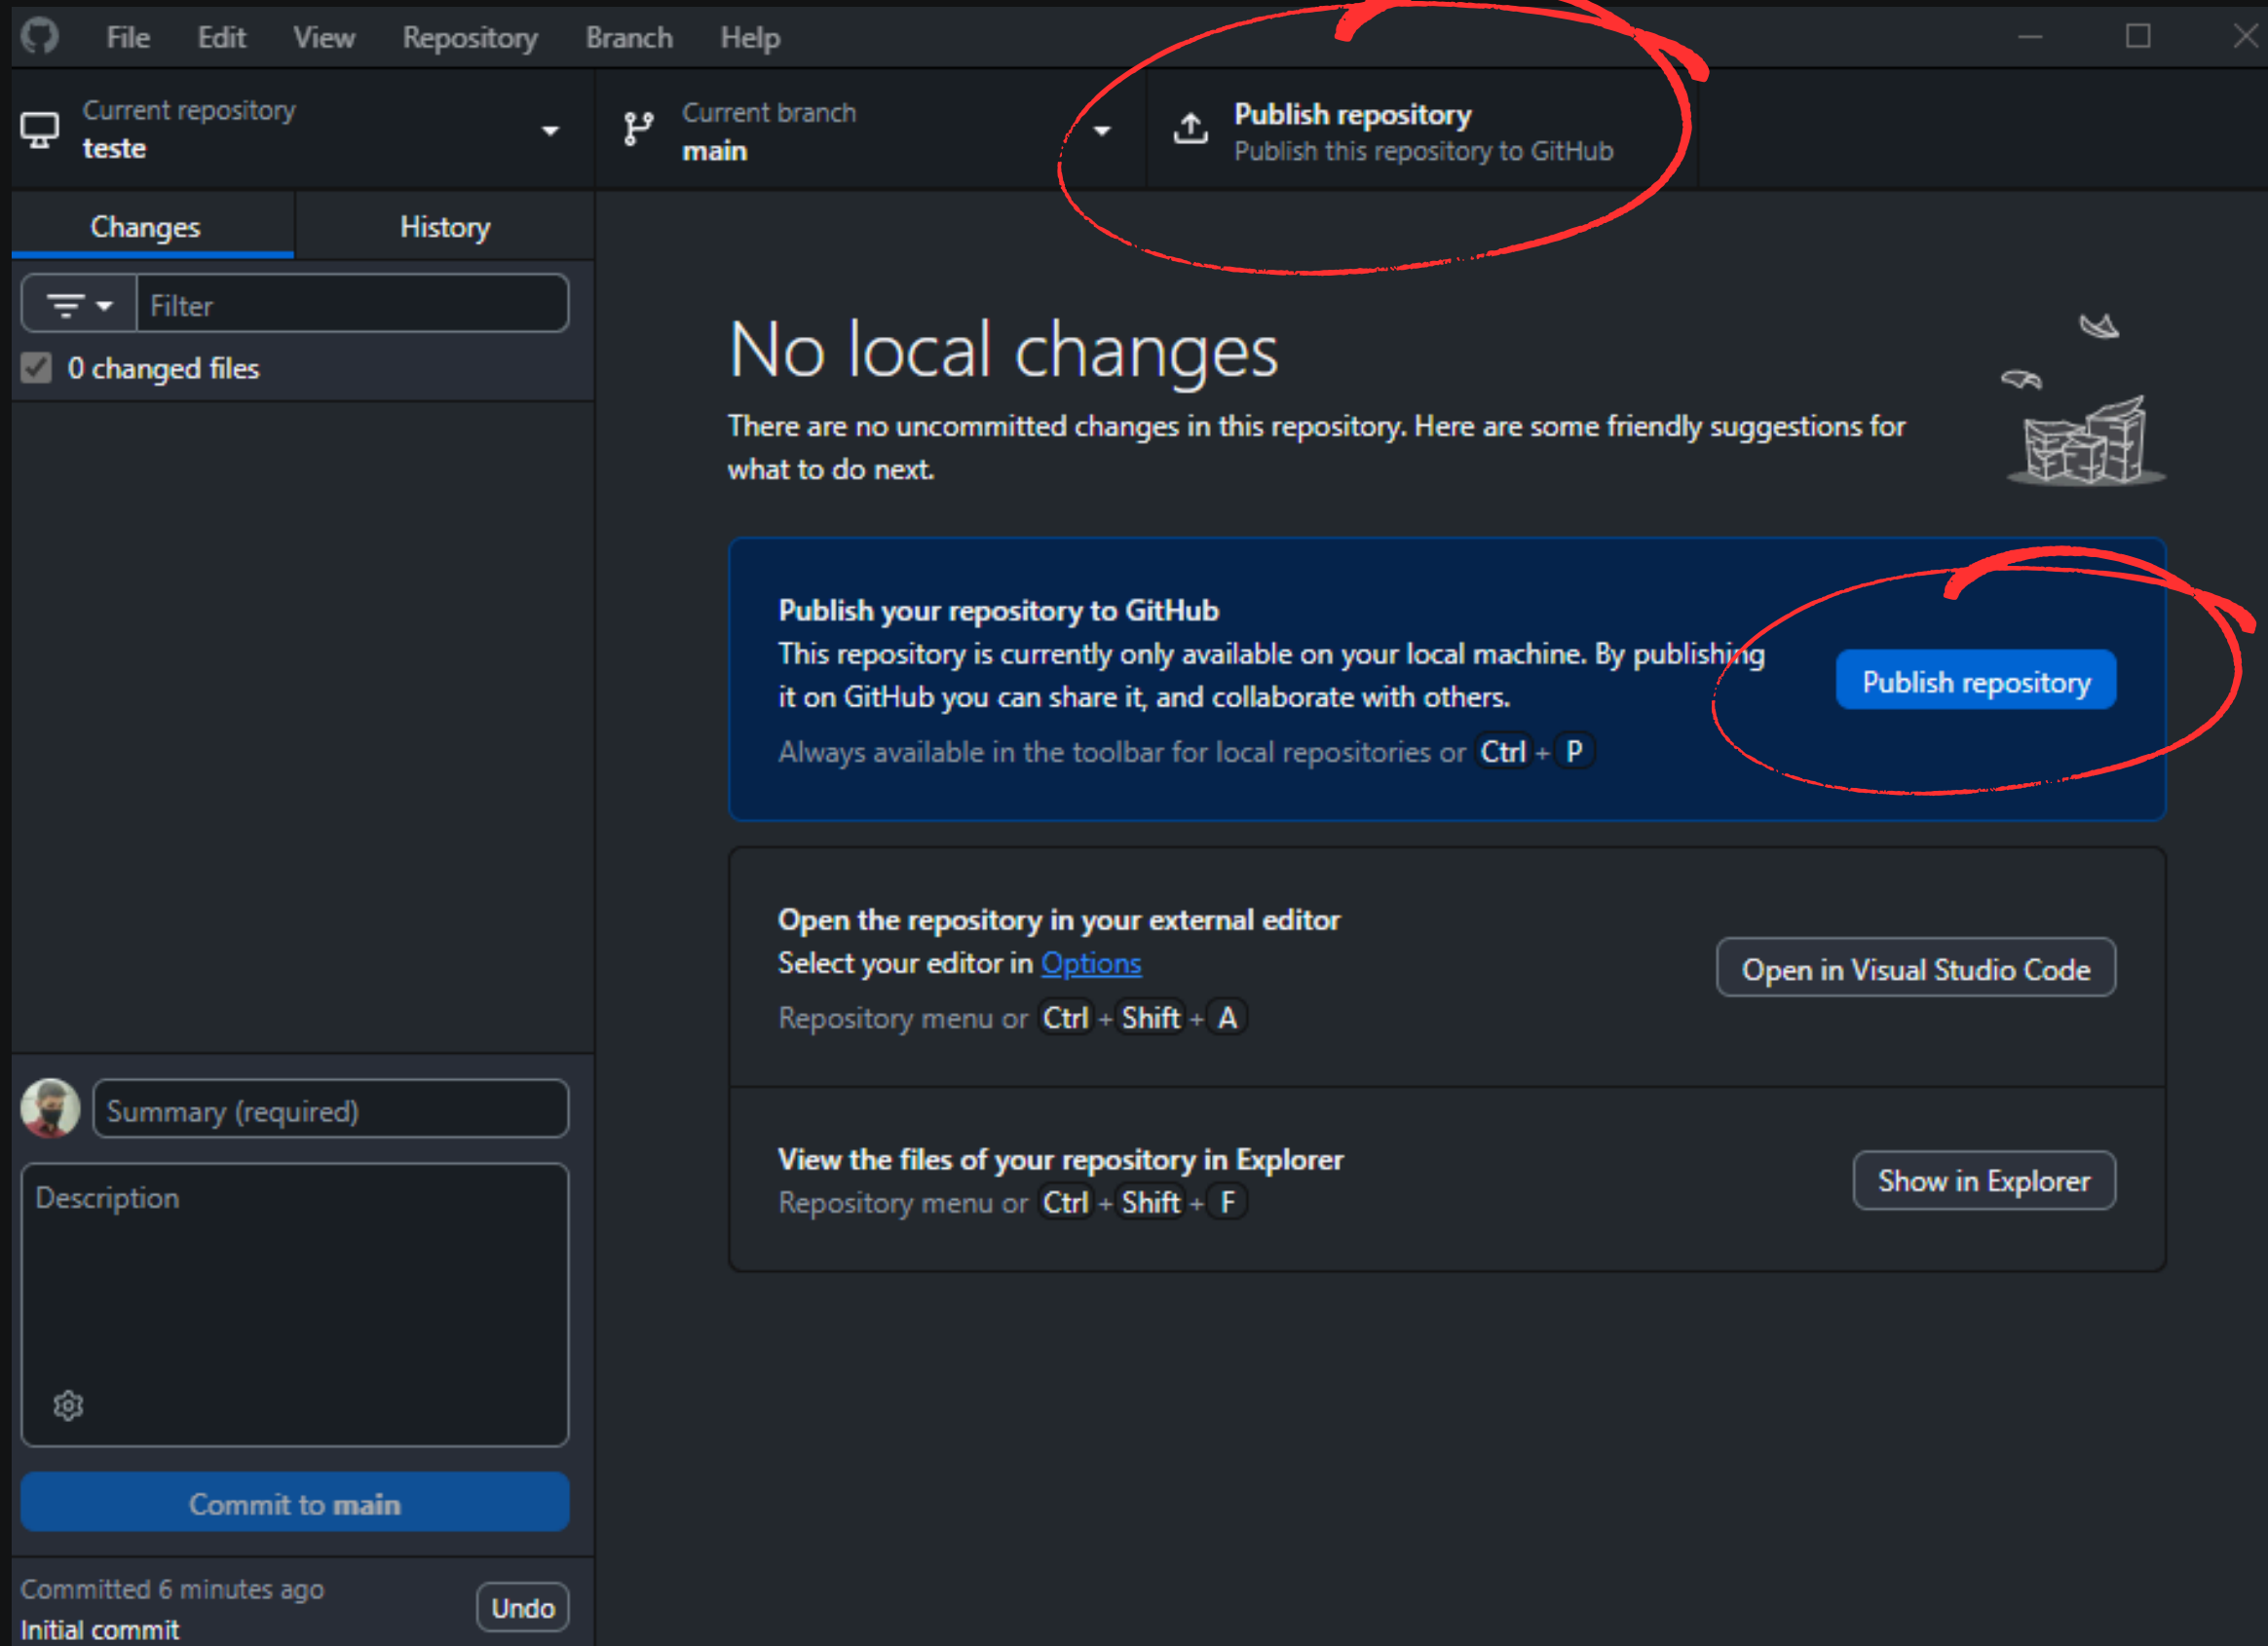

Second Screenshot: The 'File' menu is open, showing options: 'New repository...' (Ctrl+N), 'Add local repository...' (Ctrl+O), 'Clone repository...' (Ctrl+Shift+O), 'Options...' (Ctrl+,), and 'Exit' (Alt+F4). The 'Options...' option is highlighted with a mouse cursor.

Third Screenshot: The 'Options' dialog box is open. The left sidebar lists various settings: 'Accounts', 'Integrations', 'Git', 'Appearance', 'Notifications', 'Prompts', 'Advanced', and 'Accessibility'. The 'Accounts' section is selected, showing options for 'GitHub.com' and 'GitHub Enterprise'. The 'Sign into GitHub.com' button is highlighted with a mouse cursor. At the bottom, there are 'Save' and 'Cancel' buttons.

● GitHub Pages

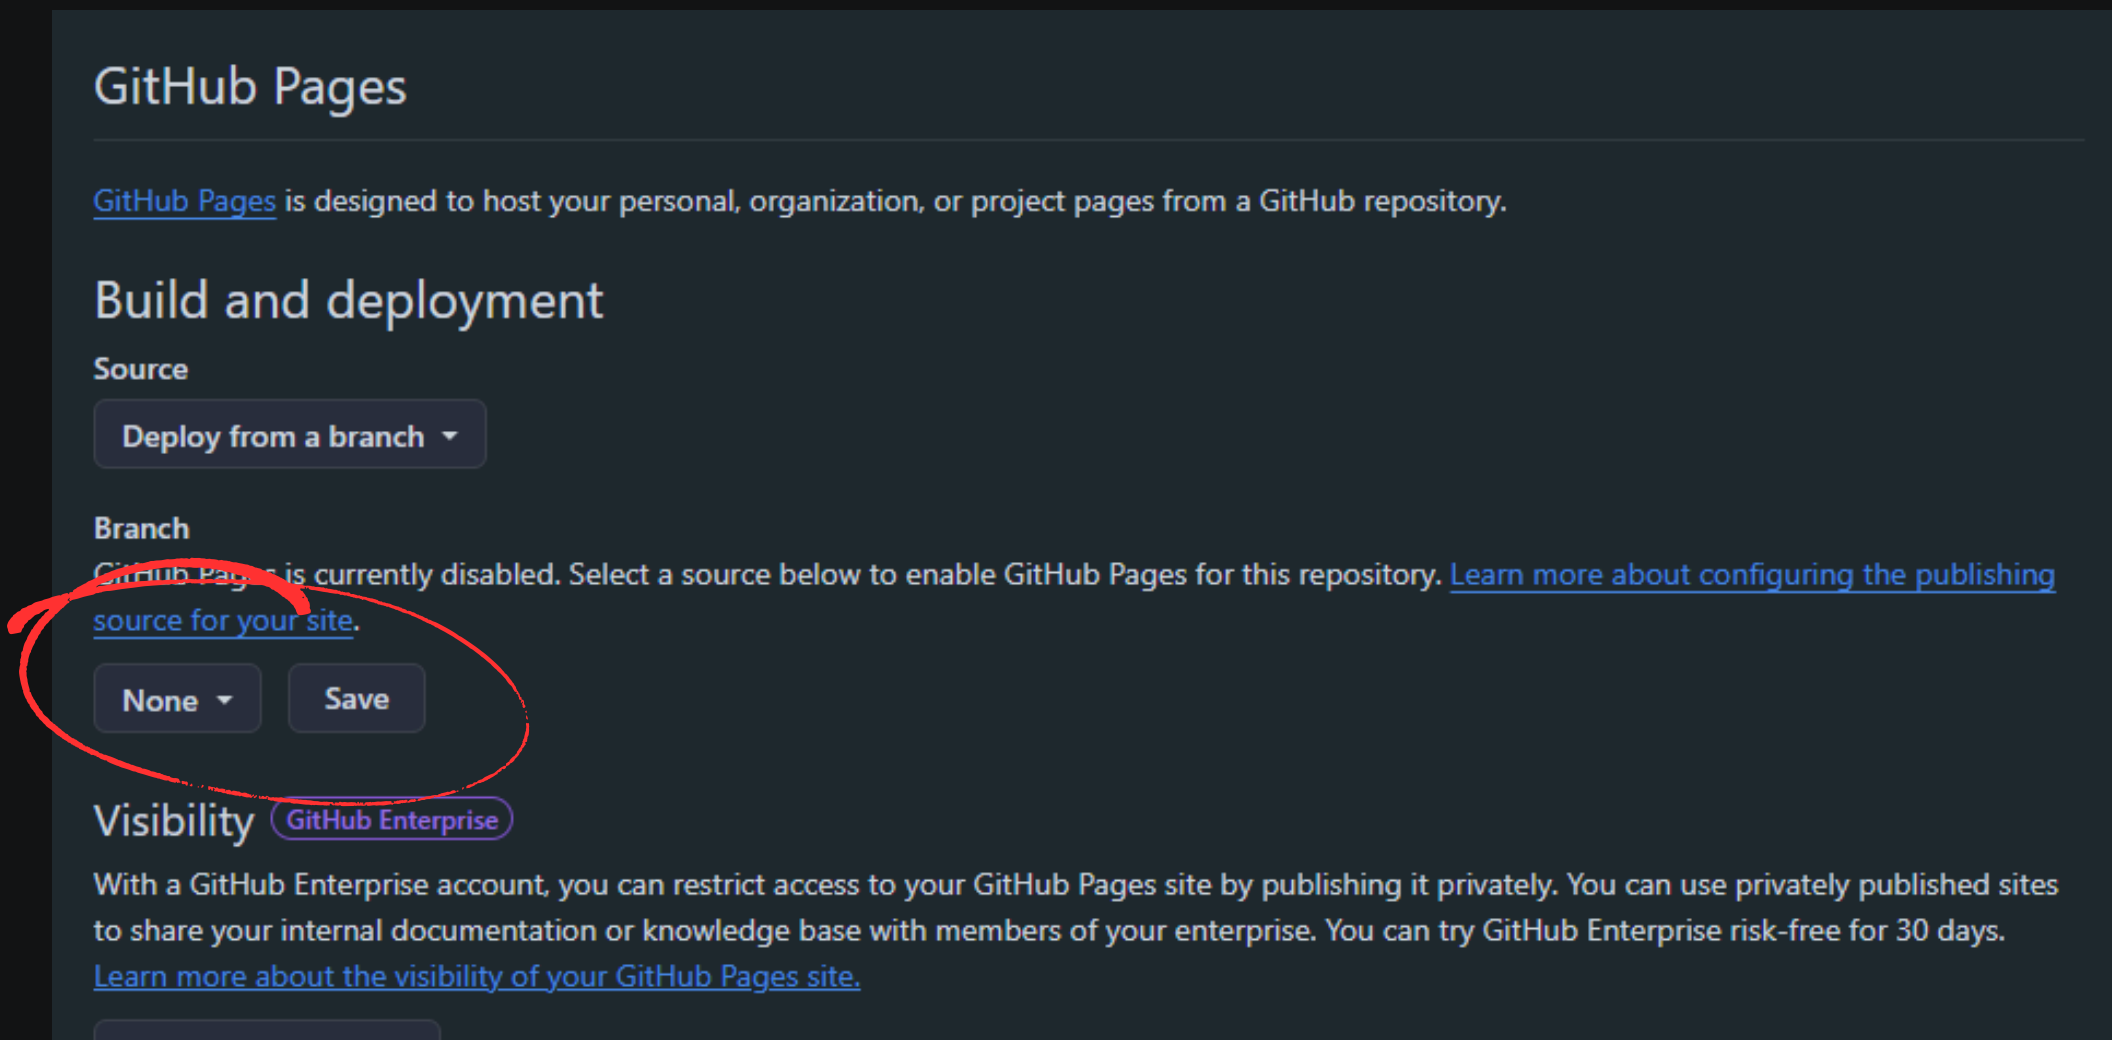

Com o GitHub Pages você pode colocar um página online, que pode ser acessada por qualquer pessoa com o link. Para isso você deve ter o repositório publicado no GitHub de forma pública. Acesse o repositório e vá em 'Settings'.

The screenshot shows the GitHub interface for the repository 'projeto-coffee' by user 'Gabriel-Scheffel'. The repository is public. The top navigation bar includes tabs for Code, Issues, Pull requests, Actions, Projects, Wiki, Security and quality, Insights, and Settings. The 'Settings' tab is circled in red. Below the repository name, there are buttons for Pin, Watch (0), Fork (0), and Star (0). The main content area shows the file list for the 'main' branch, including folders like 'estilos', 'imagens', and 'versao-01', and files like '.gitattributes', 'LICENSE', 'icon.ico', and 'index.html'. The 'About' section on the right provides information about the repository, including the MIT license, activity, stars, watchers, and forks. The 'Releases' section shows that no releases have been published. The 'Deployments' section shows 5 deployments, with the latest one being 'github-pages' 20 hours ago.

● GitHub Pages

Em 'Settings' selecione a aba 'Pages', dentro dela vá em 'Select Branch' e defina main. Salve as configurações e sua página logo estará disponível.

GitHub Pages

[GitHub Pages](#) is designed to host your personal, organization, or project pages from a GitHub repository.

☐ **Template repository**

Template repositories let users generate new repositories with the same code as this repository.

Default branch

The default branch is considered the "base" branch in your repository unless you specify a different branch.

main Edit

Releases

☐ **Enable release immutability**

Disallow assets and tags from being modified once a release is published.

Social preview

Upload an image to customize your repository's social media cards. Images should be at least 640×320px (1280×640px for best results). [Download template](#)
