● Flexbox CSS

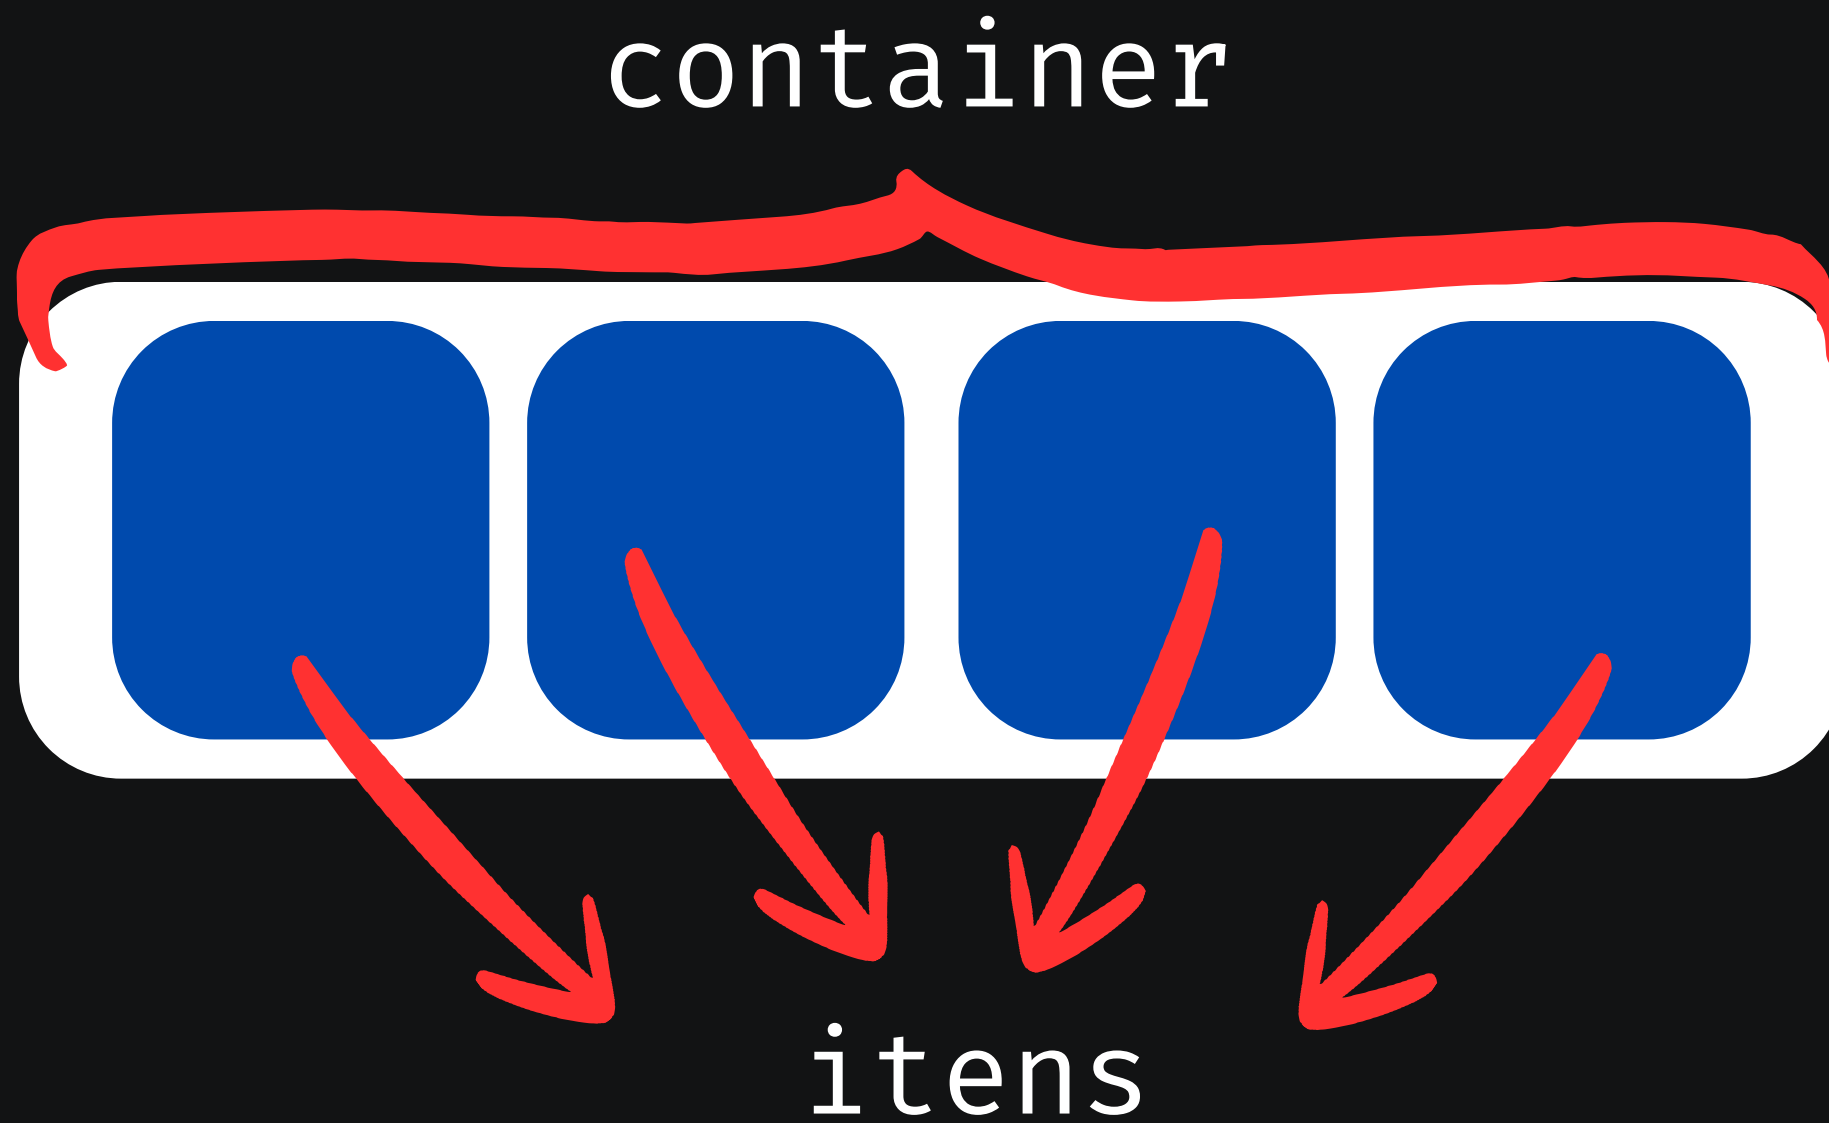

Flexible Box Module, ou simplesmente Flexbox, é um modelo de caixas flexíveis. Ele vai nos permitir criar muitos elementos que já vimos anteriormente, porém de forma muito mais flexível e adaptativa.

A ideia é que os elementos dentro de um container se adaptem automaticamente ao tamanho da página sem quebra-lá.

● Flexbox CSS

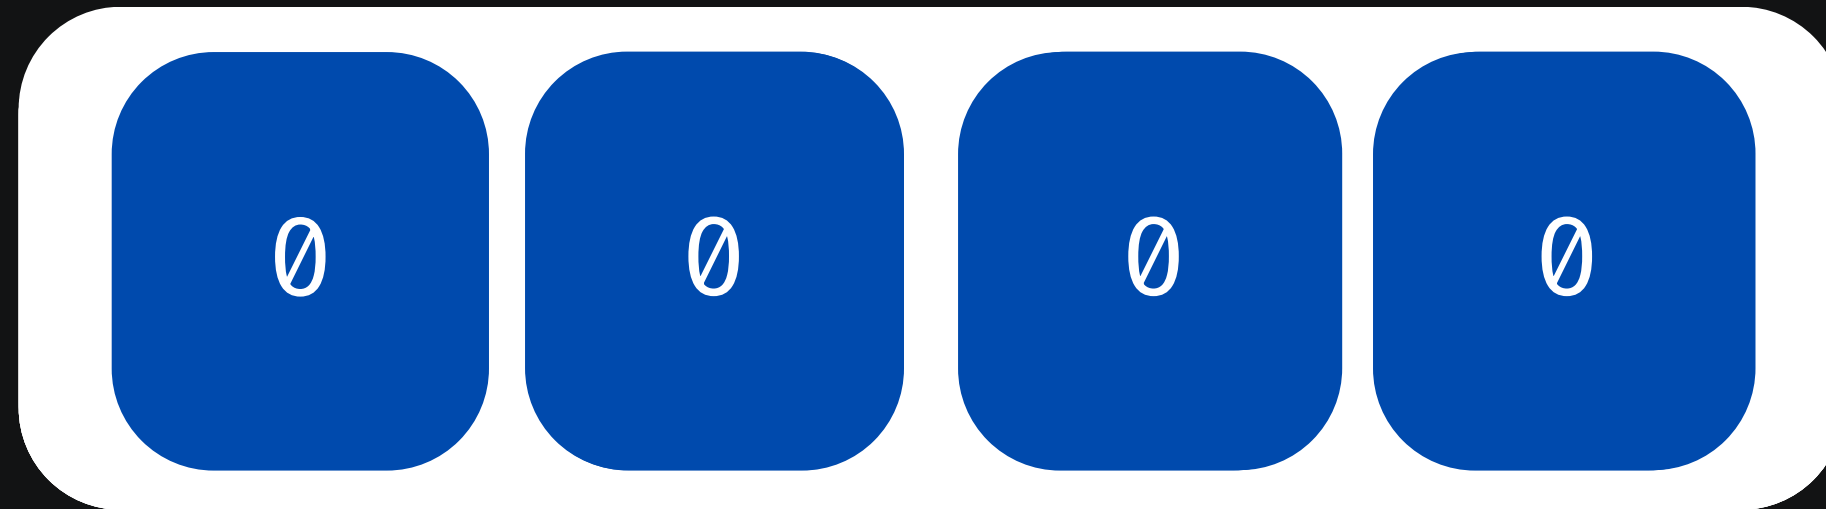

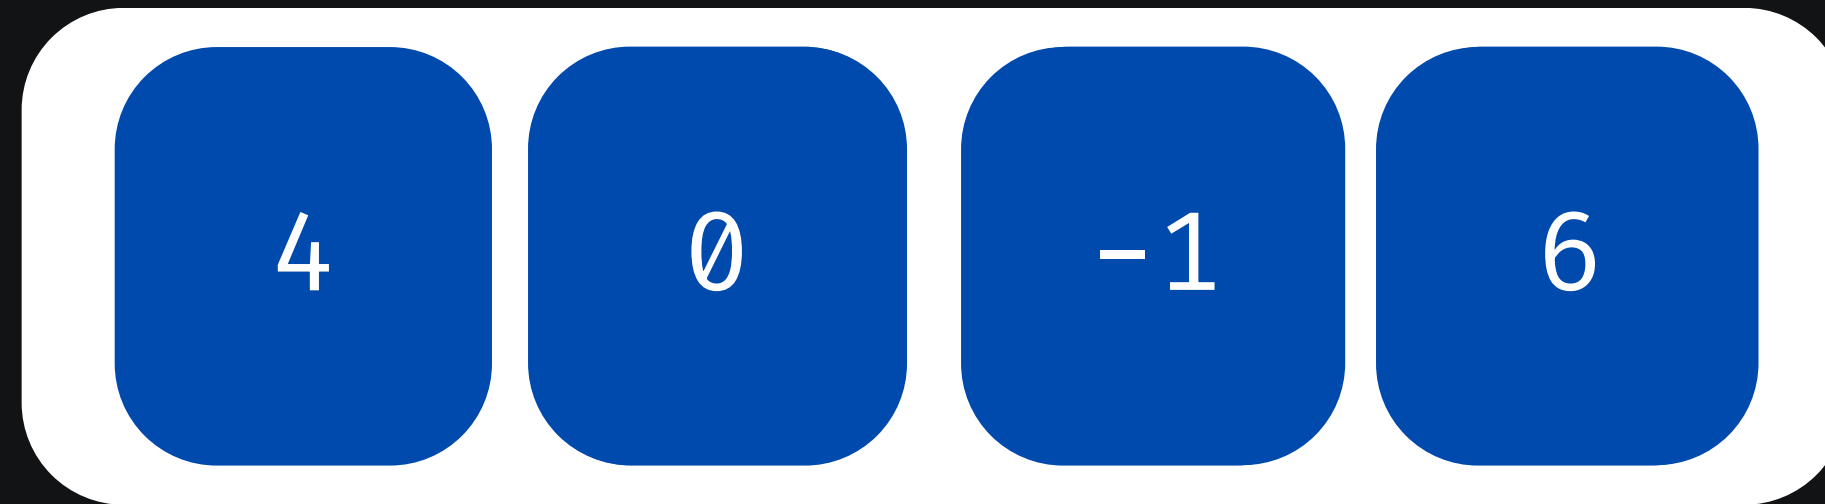

```
div.container {  
  display: flex;  
}  
  
div.items {  
  flex: auto;  
}
```

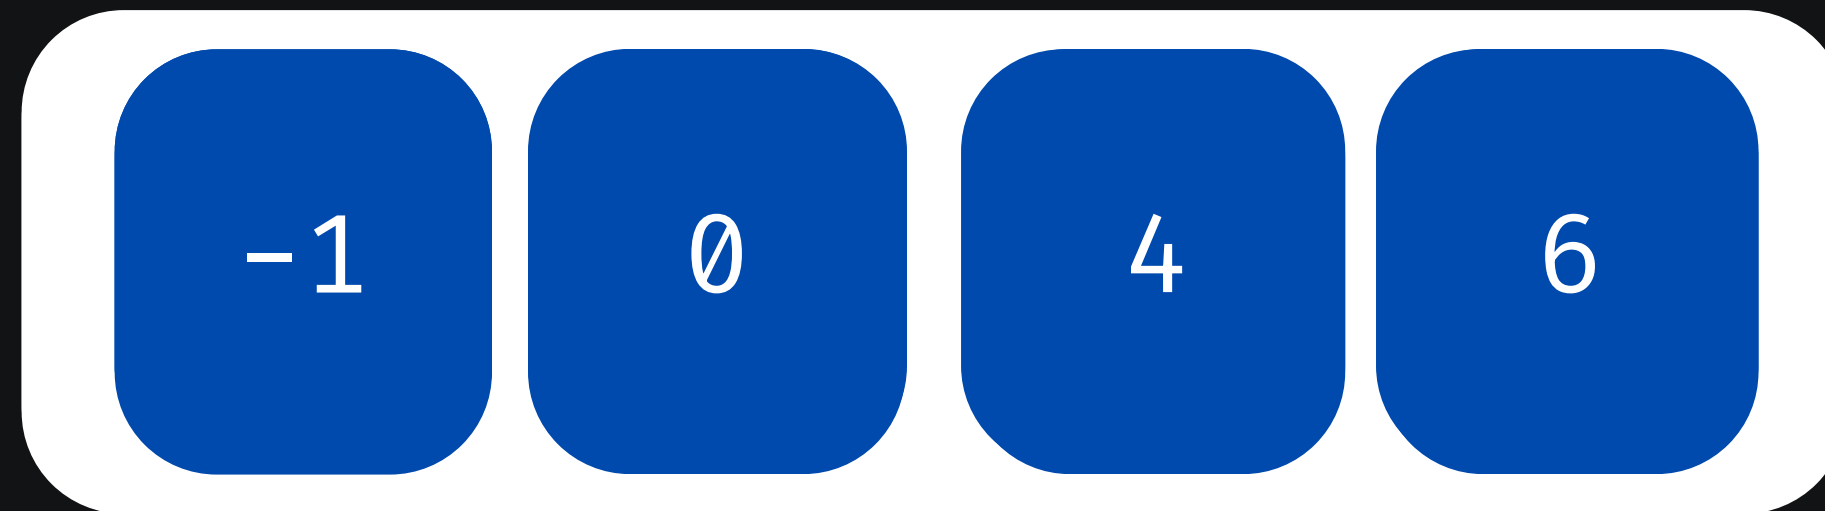

● order

A propriedade `order` serve para ordenar os itens. Cada item recebe um valor de `order` e eles se posicionam de forma crescente.

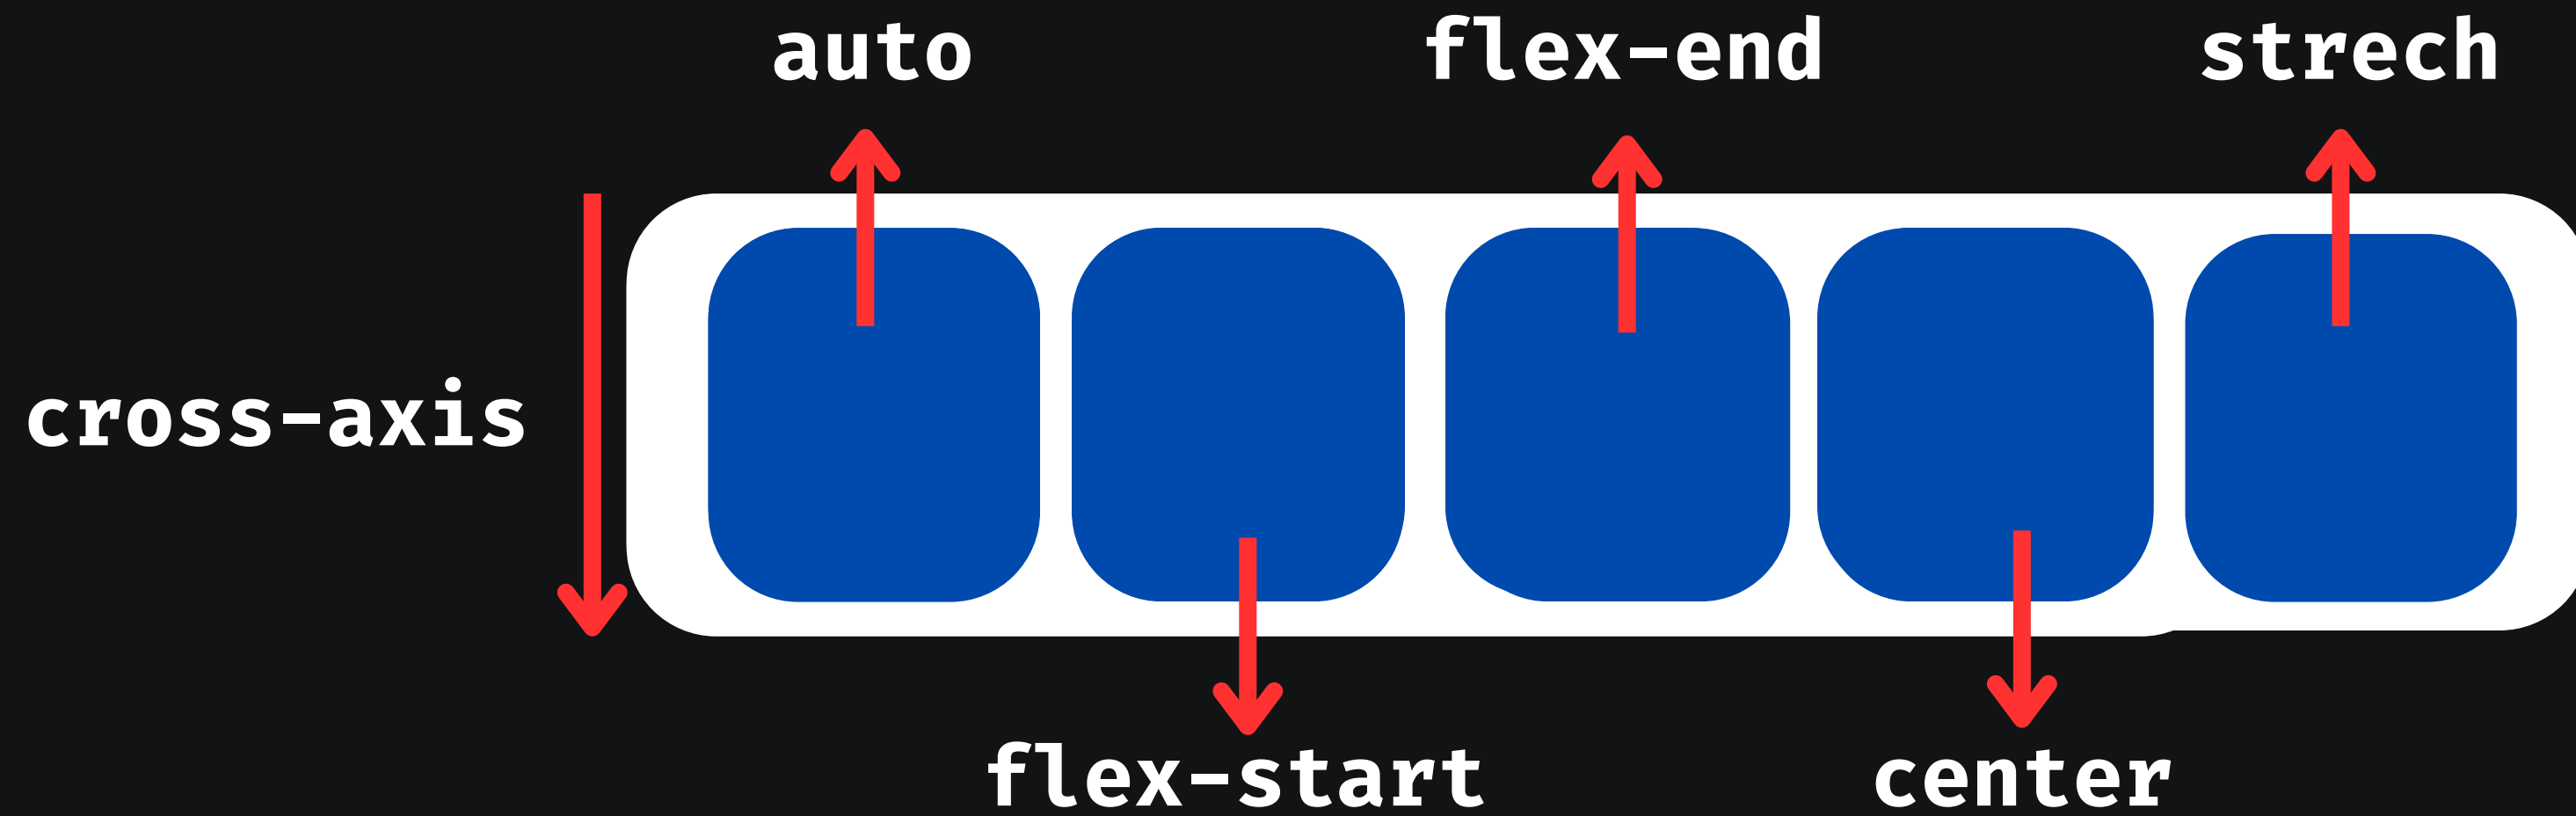

● align-self

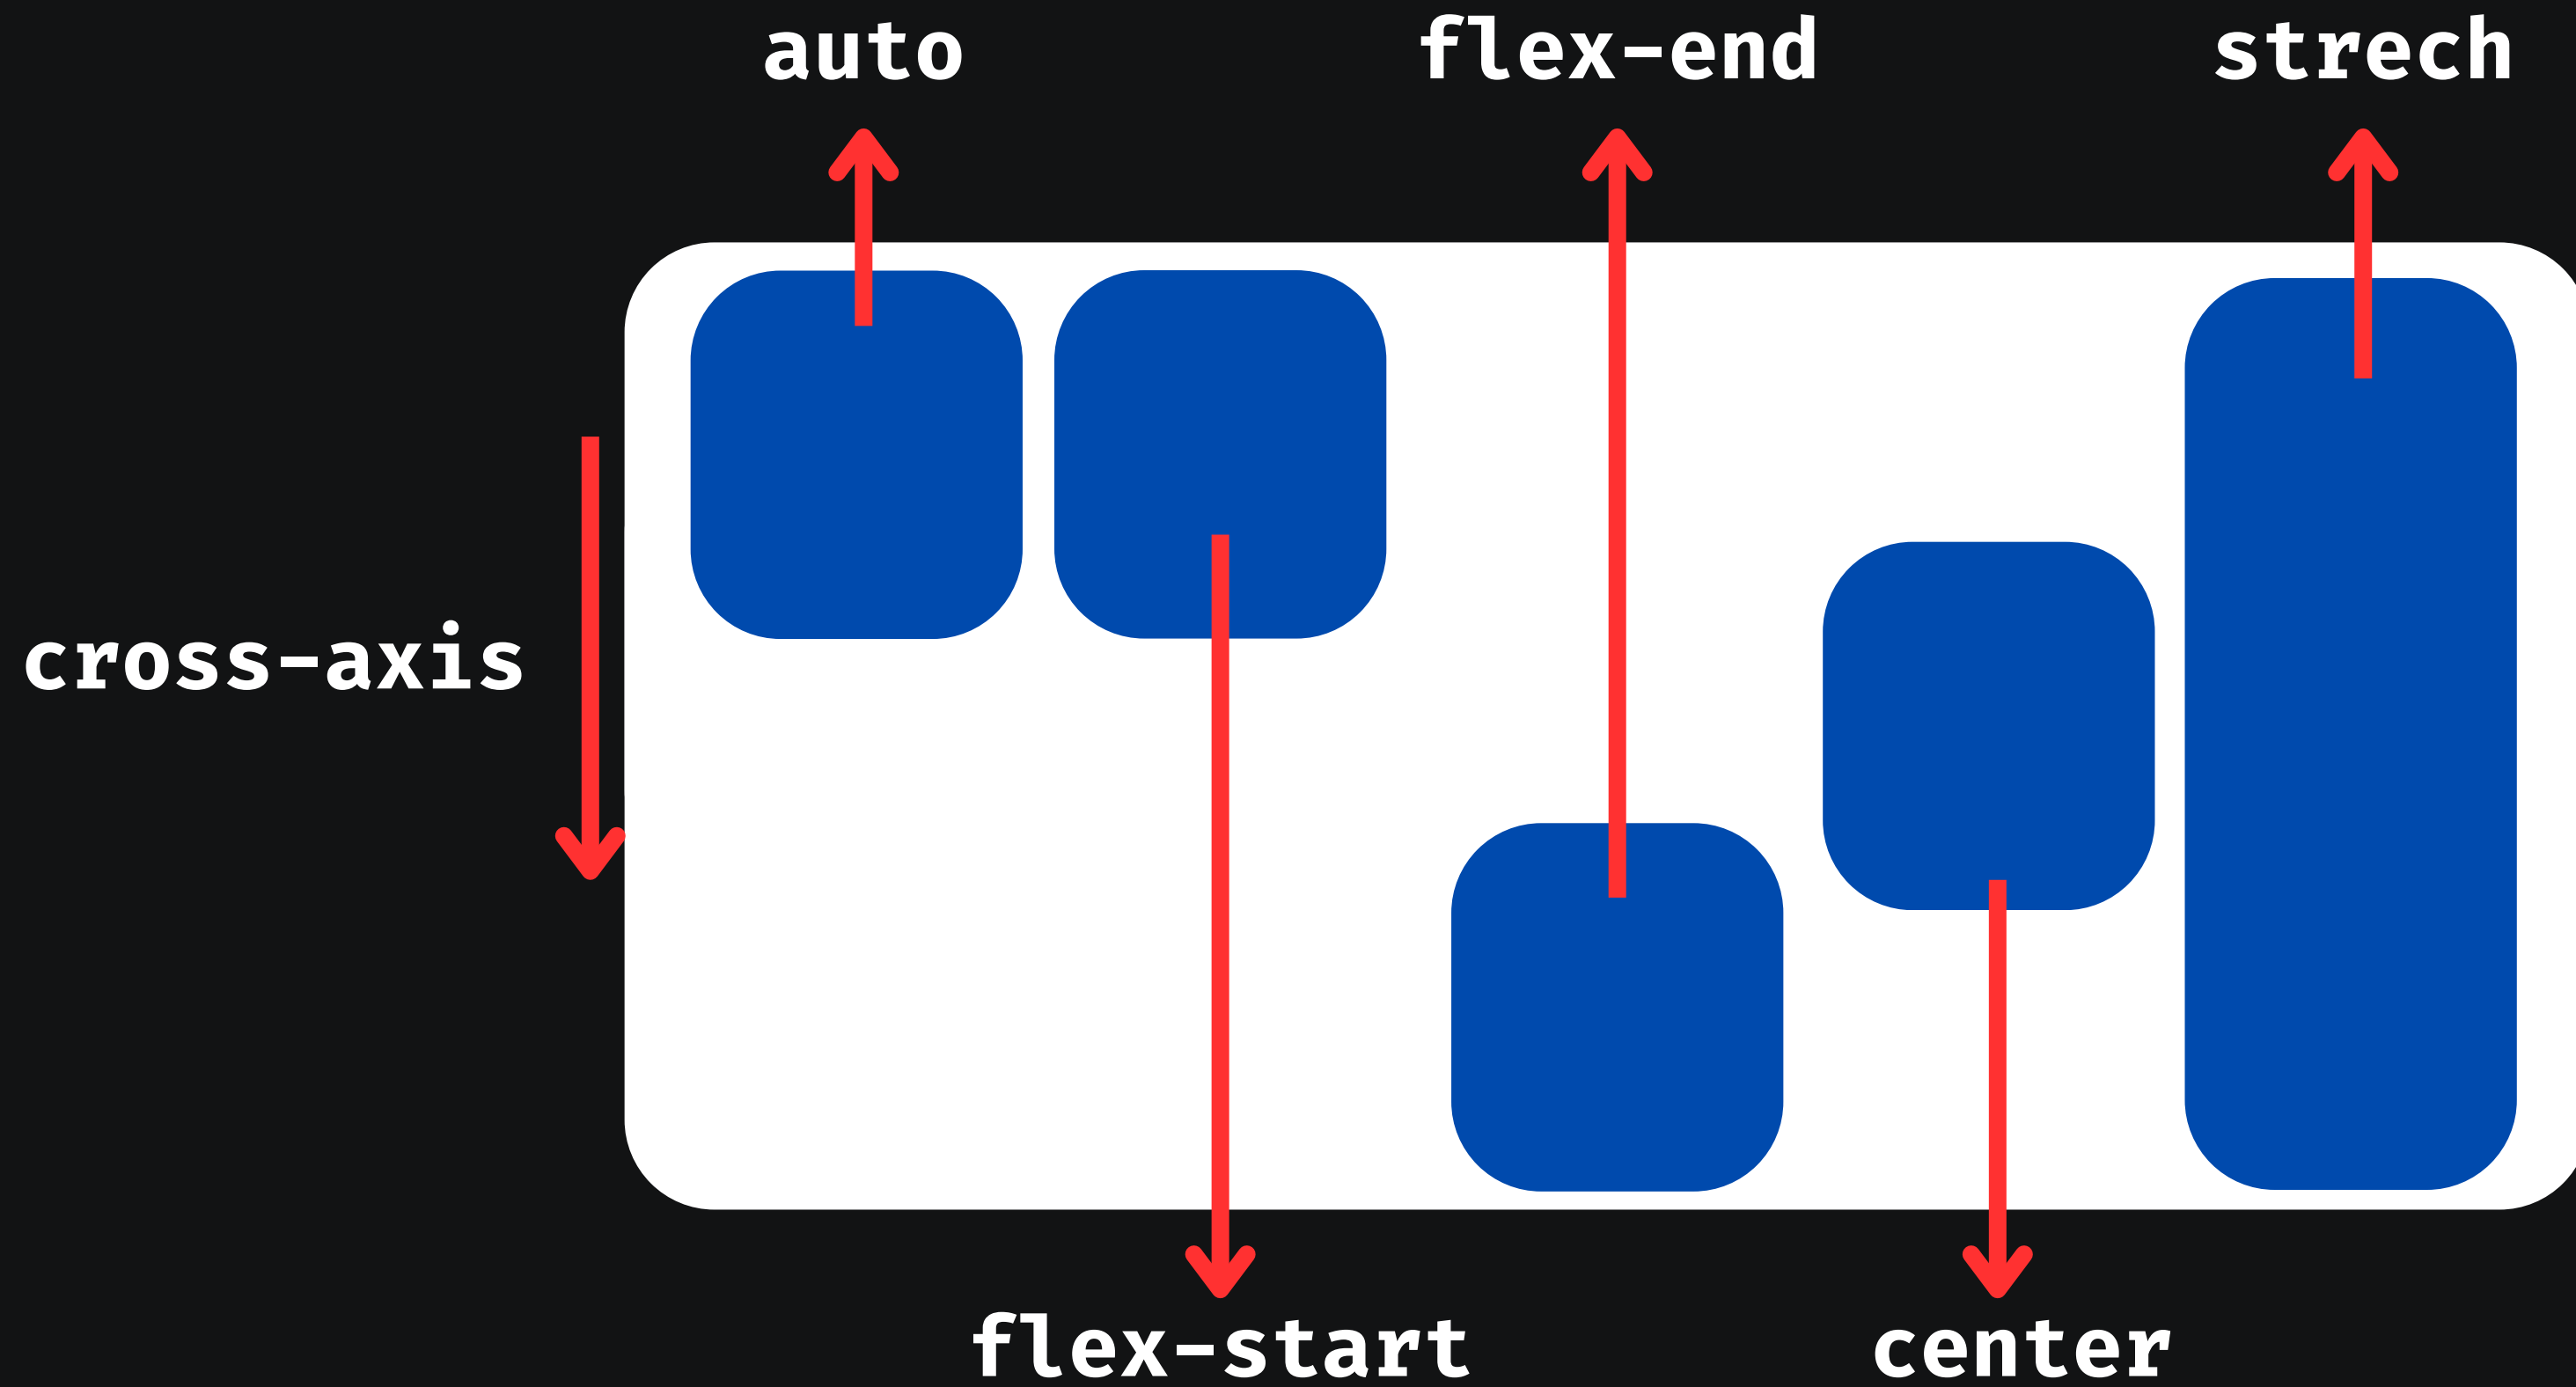

Mesmo que align-items, posiciona os itens em relação ao cross-axis, porém funciona individualmente para cada item.

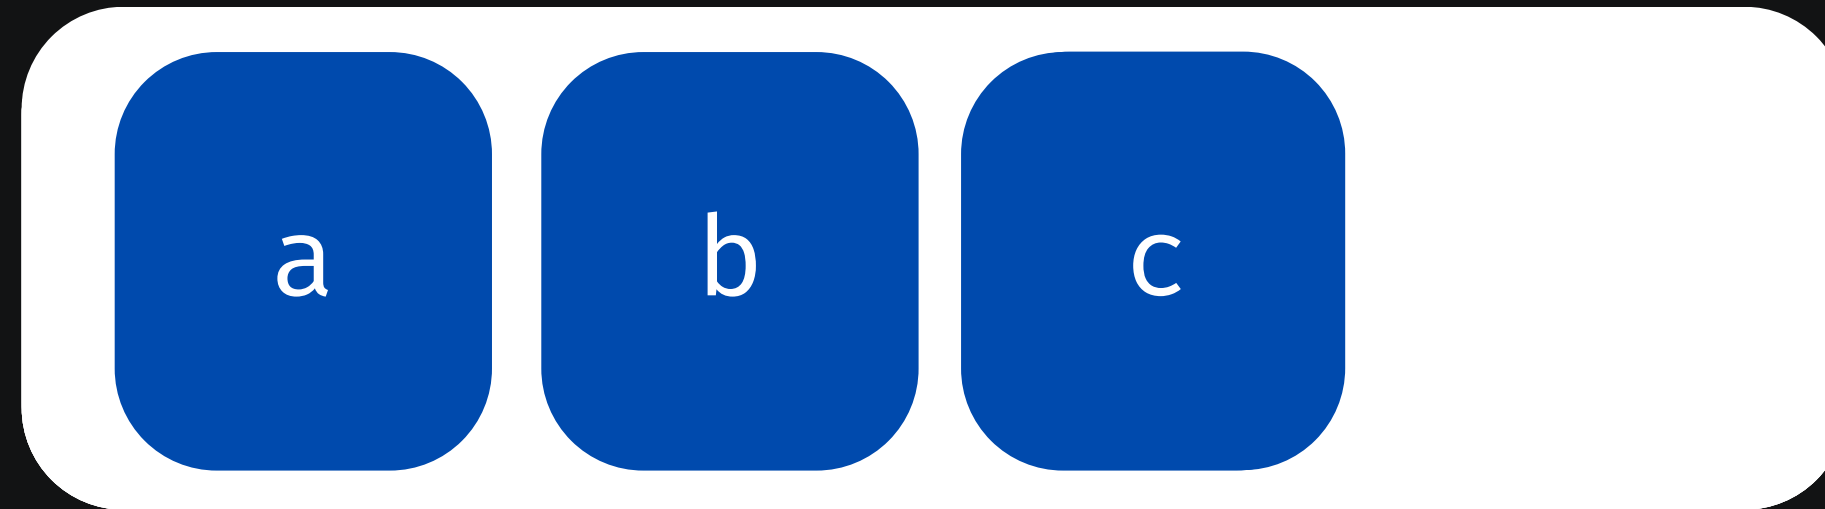

● align-self

● align-self

● flex-basis:auto

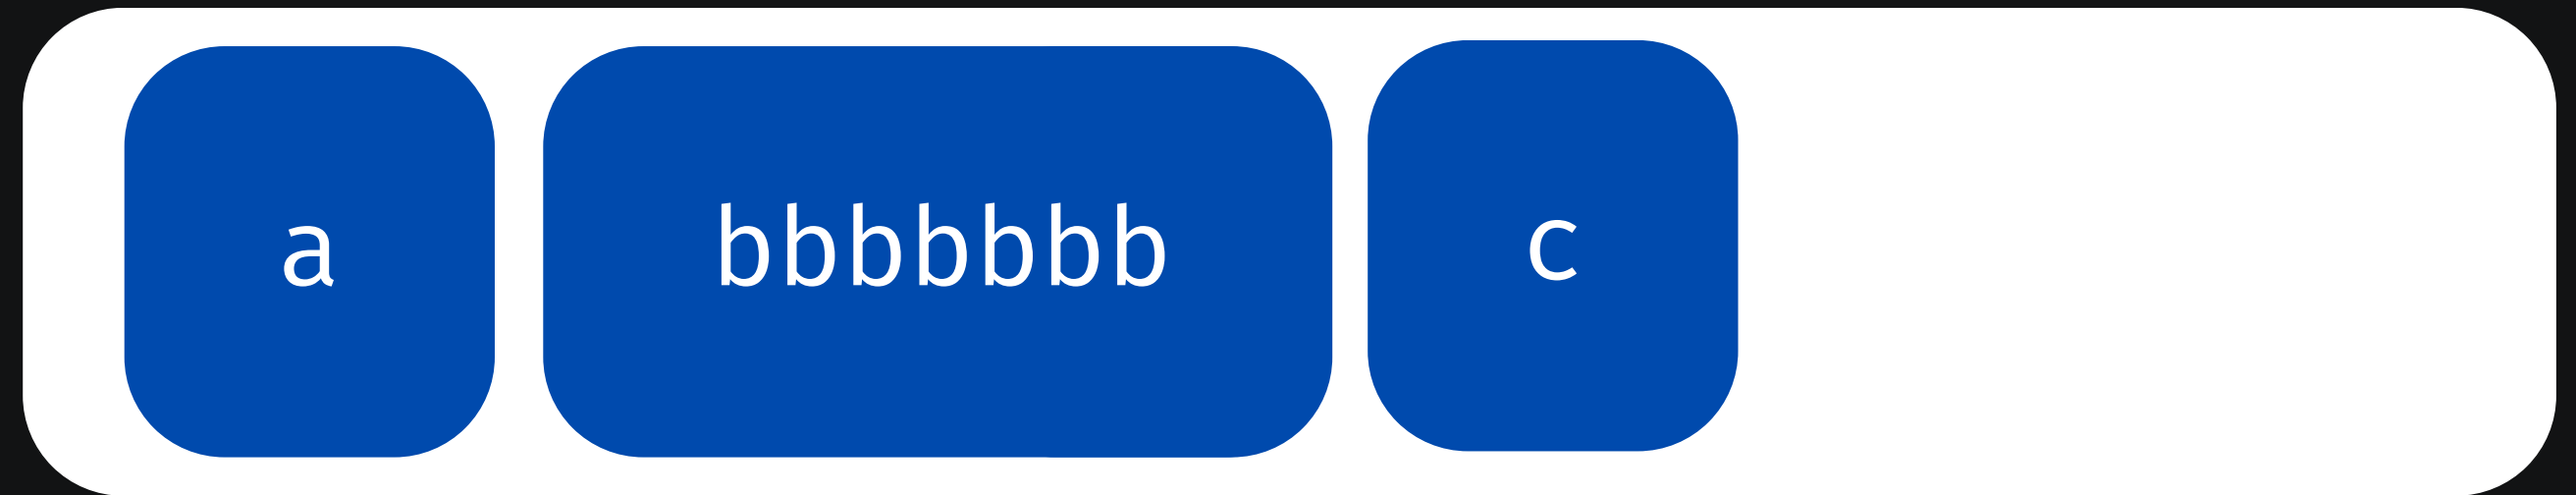

0 tamanho dos itens é dado conteúdo dentro deles

Exercício 3: FLEXBOX FROGGY

FLEXBOX FROGGY

◀ Level 1 of 24 ▶

Welcome to Flexbox Froggy, a game where you help Froggy and friends by writing CSS code! Guide this frog to the lilypad on the right by using the `justify-content` property, which aligns items horizontally and accepts the following values:

- `flex-start`: Items align to the left side of the container.
- `flex-end`: Items align to the right side of the container.
- `center`: Items align at the center of the container.
- `space-between`: Items display with equal spacing between them.
- `space-around`: Items display with equal spacing around them.

For example, `justify-content: flex-end;` will move the frog to the right.

```
1 #pond {
2   display: flex;
3   _____
4 }
