● Grid Layout CSS

A ideia do Grid Layout é a mesma do FlexBox, fazer os elementos dentro de um container se adaptarem automaticamente ao tamanho da página sem quebra-lá.

Porém, tem o principal objetivo de criar interfaces de usuário, se baseando em uma grade bidimensional. Nesse modelo de grade, os elementos filhos podem ser posicionados livremente.

Exercício 1: interface para site com grid layout

Exercício 2: GRID GARDEN

GRID GARDEN

◀ Level 1 of 28 ▶

Welcome to Grid Garden, where you write CSS code to grow your carrot garden! Water only the areas that have carrots by using the `grid-column-start` property.

For example, `grid-column-start: 3;` will water the area starting at the 3rd vertical grid line, which is another way of saying the 3rd vertical border from the left in the grid.

```
1 #garden {  
2   display: grid;  
3   grid-template-columns: 20% 20% 20% 20% 20%;  
4   grid-template-rows: 20% 20% 20% 20% 20%;  
5 }  
6  
7 #water {  
8     
9 }  
10  
11  
12
